

Supplier-Status Dashboard Pilot Launch

A focused four-week pilot to eliminate fragmented information and reclaim staff time.

The Problem: Fragmented Information

74

Status-Check Messages

Sent in the last reporting cycle
alone

~50%

Duplicate Requests

Asked for information another team
already had

9

Staff-Hours Per Week

Lost to repeated status checks

Why It Happens

Information is scattered across teams with no shared view of the full picture. No single team sees the complete picture — so everyone keeps asking.

Team A

Knows the request status

Team B

Knows the deadline

Team C

Owens the next action

The Solution: One Weekly Dashboard

One internal view answers the question every team is already asking: "**What needs attention before the next deadline?**" No more cross-team message chains — the answer is already there.

Request Status

Open • Waiting • Complete

Deadline & Owner

Due date with assigned owner

Next Action Needed

Clear next task to resolve

Three Concrete Benefits

Account Managers

Earlier visibility. Check one view instead of asking multiple people across email threads.

Account-Service Staff

Fewer repeated messages. No need to re-answer the same questions across separate threads.

Reporting Operations

Clearer ownership. Easier handoffs and fewer last-minute scrambles before deadlines.

What the Dashboard Is *Not*

- Not a replacement for official reports or account-service processes
- Not shared with clients during the pilot
- Not a record of shipment instructions, orders, or account details
- All data sanitized and approved per internal rules

Four-Week Pilot Schedule

Success Metric & Support

30% Target Reduction

In repeated status-check messages over the four-week pilot period. This is the primary measure of success.

Weekly Updates

Reporting operations refreshes all status fields once per week — a predictable, low-overhead cadence.

Dedicated Feedback Channel

Each pilot team has one named account manager contact plus a short feedback form for quick issue reporting.

Three Pilot Checks

At the end of Week 4, the review will answer three questions. These are the criteria that determine whether the pilot succeeds.

1

Message Volume

Are repeated status-check messages measurably reduced?

2

Field Clarity

Do users understand the fields without additional explanation?

3

Operational Load

Does the weekly update process create too much work for reporting operations?

Next Steps

Three decisions needed from this room to move forward.

Your confirmation today keeps the Monday launch on track. No further approvals needed after this meeting.
