How to Use This Book

This book helps you plan, design, and deliver clear workplace presentations with visuals.

The textbook is designed for B1-B2 business English learners who need to plan, design, and deliver clear workplace presentations with visuals. Work

through the units in order. Each unit builds one part of a final presentation portfolio.

Course Map

Unit	Main Focus	Portfolio Output
1	Audience, purpose, and workplace context	Presentation brief
2	Message, objective, and relevance	Core message and opening
3	Structure and flow	Full presentation outline
4	Signposting and transitions	Preview, transitions, and references
5	Clear visual communication	Accessible slide or visual draft
6	Data, charts, and evidence	One chart explanation
7	Slide and document workflow	Visual pack plus notes
8	Delivery	Rehearsed 3-minute segment
9	Online, hybrid, and recorded delivery	Adapted online or recorded version
10	Q&A and interaction	Q&A response bank
11	Final rehearsal and feedback	Revised full presentation
12	Final presentation and reflection	Delivered presentation plus self-review

Unit 1: Audience, Purpose, and Workplace Context

Good presentations are planned from the listener's needs, not from the speaker's material. Before you decide what to show or say, define who will listen, why they are listening, and what should be different after the presentation.

In this unit, you prepare a short presentation brief. This brief will become the starting point for your message, structure, visuals, and final delivery.

Learning Outcomes

By the end of this unit, you can:

- identify the audience, occasion, and workplace purpose of a presentation
- state what the audience should know, decide, or do by the end
- distinguish a presentation from a document, update, briefing, or informal explanation

Core Skill: Plan from the Audience Outcome

A topic tells people what the presentation is about. A purpose tells people why it matters now. An audience outcome tells you what the audience should know, decide, or do after listening.

Compare these planning notes:

Topic only	Stronger audience outcome
Monthly processing errors	By the end, the team should understand the main causes of recent processing errors and agree on one change to reduce them.
New service guide	By the end, staff should know when to use the new guide and where to send follow-up questions.
Project update	By the end, managers should understand the current results, the remaining risk, and the decision needed this week.

The stronger notes are easier to present because they show direction. They also help you choose what to include and what to leave out.

Presentation English Focus

Use clear purpose and outcome language at the planning stage.

Function	Useful language
State the context	This presentation is for... / The situation is... / We are meeting because...
State the purpose	The purpose of this presentation is to... / I would like to explain... / I will recommend...
State the audience outcome	By the end, you should be able to... / By the end, we need to decide... / After this presentation, the team should know...
Show relevance	This matters because... / This affects... / The main reason this is important is...

Notice the difference between “I will talk about...” and “By the end, we need to decide...”. The second version gives the presentation a workplace reason.

Useful terms:

Term	Simple meaning
audience outcome	what listeners should know, decide, or do after the presentation
workplace context	the work situation, meeting, problem, or decision behind the presentation
handoff	the point where responsibility moves from one person or team to another

Worked Example

The presenter needs to give a short internal briefing about a repeated workflow problem.

Planning question	Example answer
Who is the audience?	A manager and two team members who can approve or test a workflow change.
What is the occasion?	A short meeting after several delays in the same process.
What is the workplace problem?	Information is not being handed off clearly between two steps.
What should the audience	Most delays come from unclear handoff notes.

Planning question	Example answer
know?	
What should the audience decide or do?	Approve a small trial of a shared checklist.
What is the presentation purpose?	Recommend a trial workflow change and get agreement on next steps.

Optional model reference: for a business-client version, see the business-client model in the Process Improvement Briefing Models. For a government-agency version, compare the government-agency model in the same model set.

Practice 1: Identify the Real Purpose

Read each situation. Choose the strongest purpose.

1. You have been asked to present last month's service delays to your team manager.
 - A. To show all the numbers from last month.
 - B. To explain the main causes of the delays and recommend one next step.
 - C. To describe the department in general.
2. Your team is introducing a new internal guide.
 - A. To make staff aware of when to use the guide and how to ask questions.
 - B. To read the guide aloud.
 - C. To show that the guide exists.
3. You need to report the results of a small project.
 - A. To list every activity in date order.
 - B. To prove that the project team worked hard.
 - C. To explain the results, limits, and recommended next action.

Practice 2: Rewrite Topic-Only Goals

Rewrite each topic as an audience-outcome goal.

Use this frame:

By the end, the audience should understand ___ and decide / agree / know / prepare ___.

1. New reporting format
2. Processing backlog
3. Customer inquiry trends

4. Updated approval process

Practice 3: Draft Your Presentation Brief

Complete the brief for a presentation you may give in class.

Question	Your notes
Working topic	
Audience	
Occasion or meeting type	
Time limit	
Main workplace context	
What the audience already knows	
What the audience needs to know	
What the audience should decide or do	
Possible visual support	
Risk: what might confuse the audience?	

Then write a one-paragraph presentation brief:

I will give a **-minute presentation for** . The purpose is to . **By the end, the audience should** . This matters because ____.

Speaking Task

Work with a partner. Explain your presentation brief in 45 seconds.

Use this sequence:

1. My audience is...
2. The presentation is about...
3. The purpose is not only to..., but to...
4. By the end, I want the audience to...
5. This matters because...

Your partner listens and asks one clarification question:

- Who exactly needs to decide?
- What does the audience already know?
- What action do you want after the presentation?
- What could be unclear for them?

Learner Deliverable

Submit a one-paragraph presentation brief. It should include the audience, purpose, audience outcome, and workplace relevance.

Unit Wrap-Up

A clear presentation begins before you write the opening or design visuals. If you know the audience outcome, you can make better decisions about message, structure, evidence, and delivery.

Before the next unit, keep your brief. You will use it to write a core message and opening.

Unit 2: Message, Objective, and Relevance

An effective presentation is not only a topic with information. It has a message: the main point you want the audience to remember, believe, or act on. When your message is clear, your opening becomes easier to write and your visuals have a purpose.

In this unit, you turn your presentation brief into a core message and a short opening.

Learning Outcomes

By the end of this unit, you can:

- write a core message as a claim, not only a topic
- connect the message to audience relevance
- draft a short opening that gives context, purpose, and value

Core Skill: Turn a Topic into a Message

A topic names the area. A message says what you want to communicate about that area.

Topic	Core message
Processing delays	Most delays come from unclear handoffs, so we should test a shared checklist for one month.
New support guide	The new guide will reduce repeated questions if staff use it before sending requests to the support team.
Project results	The pilot improved response time, but we need one more review before wider rollout.

A strong core message usually has three parts:

1. a clear claim
2. a reason or evidence direction
3. an action, decision, or implication

This does not mean every message must be long. It means the message should do more than name the subject.

Presentation English Focus

Use relevance language to show why the audience should listen.

Function	Useful language
Give context	Over the last month, we have seen... / Recently, the team has been dealing with...
State the message	My main point is that... / The key message is... / I recommend that we...
Explain relevance	This matters for us because... / This affects our ability to... / The impact is...
Connect to action	Today, I am asking for... / The decision we need is... / The next step I recommend is...

For a business audience, avoid an opening that only says, “Today I will talk about...” Add the value or decision.

Worked Example: From Brief to Opening

Presentation brief:

I will give a five-minute presentation for a small operations team. The purpose is to recommend a trial workflow change. By the end, the audience should understand why handoff delays are happening and approve a one-month checklist trial. This matters because repeated delays are creating extra work and making deadlines harder to meet.

Core message:

Most delays come from unclear handoffs, so a shared checklist should reduce repeated work and help the team meet deadlines.

Short opening:

Over the last month, we have had several delays at the handoff stage of the process. My main point today is that many of these delays are avoidable. I will show where the problem appears, explain why a shared checklist is a practical first step, and ask for approval to test it for one month.

This opening is short, but it gives context, message, structure, and action.

Optional model reference: compare the openings in the Process Improvement Briefing Models. Notice how the business-client and government-agency versions use the same communication skill with different details.

Practice 1: Topic or Message?

Decide whether each sentence is a topic or a message.

Sentence	Topic or message?
The new customer inquiry form	
The new form should reduce repeated questions if staff use the category menu correctly.	
Results from the pilot project	
The pilot reduced repeated work, but the next rollout needs clearer ownership.	
Weekly reporting problems	

Then rewrite two topics as messages.

Practice 2: Use the “So What?” Test

Read each weak message. Ask “So what?” and improve it.

1. I will explain the new workflow.
2. This presentation is about last month’s data.
3. We made a new dashboard.
4. I will introduce the project results.

Use these frames if helpful:

- This matters because...
- The audience needs this information so they can...
- My recommendation is...
- The decision we need is...

Practice 3: Improve a Weak Opening

Weak opening:

Hello. Today I will talk about the new workflow. First, I will explain the current situation. Next, I will explain the new workflow. Finally, I will explain the schedule.

Improve it by adding:

- one sentence of context
- one clear message
- one relevance statement

- one action or decision

You may use this structure:

Recently, . ***My main point is that*** . This matters because . ***Today, I will explain*** and ask for ____.

AI Critical Literacy: Check a Generic Opening

Sometimes a generated opening sounds smooth but does not fit the real audience. Read this flawed sample.

Good morning everyone. Today, I am excited to share an innovative solution that will transform our operations and create excellent value for all stakeholders.

Discuss:

1. What is too generic?
2. What information is missing?
3. What could be risky if the presenter has not checked the facts?
4. How can you rewrite it in clear learner-owned English?

Do not use this task to outsource your own opening. The goal is to notice weak language, check responsibility, and write your own message more clearly.

Bilingual Planning Note

You may plan ideas in the language that helps you think efficiently. However, your assessed message and opening should be drafted, revised, and rehearsed in natural English. Avoid translating sentence by sentence, because the result often sounds indirect or overloaded.

Speaking Task

Present your opening to a partner in 45-60 seconds.

Use this sequence:

1. Context: Recently, we have...
2. Message: My main point is...
3. Relevance: This matters because...
4. Preview: I will first..., then..., and finally...
5. Action: Today, I am asking for...

Your partner gives feedback using two questions:

- Do I understand the main message?
- Do I understand why this matters to the audience?

Learner Deliverable

Submit:

- one core message
- one short opening of 4-6 sentences
- one note explaining why the message is relevant to the audience

Unit Wrap-Up

A strong message helps the audience understand your direction early. It also helps you control what belongs in the presentation. If a detail does not support the message, it may belong in backup material, a follow-up document, or no material at all.

In the next unit, you will organize your message into a clear structure.

Unit 3: Structure and Flow

Structure helps listeners follow your thinking in real time. A document can be reread, but a presentation moves forward, so the audience needs a clear path from context to evidence to action.

In this unit, you choose a structure that fits your purpose and build a full presentation outline.

Learning Outcomes

By the end of this unit, you can:

- choose a structure that fits the presentation purpose
- organize supporting points and evidence in a logical sequence
- use a planning map without forcing every presentation into three equal points

Core Skill: Choose the Structure That Fits the Job

Different business purposes need different structures. A simple list is often not enough because it does not show the relationship between points.

Purpose	Useful structure	Best when you need to...
Recommend a change	Problem - cause - solution - action	explain why change is needed
Ask for a decision	Situation - options - criteria - recommendation	compare choices clearly
Report progress	Objective - current status - issue - next step	update a team or manager
Explain results	Question - evidence - meaning - implication	turn data into a business point
Launch a service or process	Need - value - plan - next step	explain what changes and why

There is no rule that every presentation needs exactly three points. Three points can be useful, but the structure should come from the purpose, audience, and evidence.

Core Skill: Use Examples and Evidence Well

Every main point needs support. In a presentation, support usually comes from an example, evidence, or both.

Support type	What it does	Example
Example	Makes the point concrete	"Last Friday, three people asked who owned the same supplier reply before the reporting deadline."
Evidence	Shows that the point is not only an opinion	"There were 38 late document handoffs last month, and 61% involved unclear handoff notes."
Explanation	Connects the support to the message	"This matters because the team loses time checking the same information in different places."

A useful example is specific enough to picture, but not so detailed that it distracts from the message. Use fictional or sanitized details when you practise. Do not use real client, account, order, shipment, applicant, staff, ticket, or personal information.

Place details carefully:

Detail type	Best place
Essential example that proves the main point	Main body
Small number or simple comparison	Main body
Detailed data table	Appendix, backup material, or Q&A
Confidential or identifying detail	Do not include it
New idea that changes the recommendation	Earlier in the body, not only in the conclusion

Presentation English Focus

Use preview and transition language to guide the audience.

Function	Useful language
Preview the structure	I will cover three points:... / I will first explain..., then..., and finally...
Move forward	Let me move to the next point. / The next issue is... / This brings

Function	Useful language
	me to...
Refer back	As I mentioned earlier,... / This connects to the first point because...
Refer forward	I will return to this in the recommendation. / I will explain the numbers in a moment.
Show logic	Because of this,... / As a result,... / The main reason is...

Do not overload the audience with too many signposts. Use them when the direction changes or when the connection may not be obvious.

Worked Example: Structure for a Process Improvement Briefing

Purpose: recommend a trial workflow change.

Core message:

A shared checklist should reduce repeated handoff problems and make the process easier to manage.

Possible structure:

Section	Purpose	Example content
1. Current problem	Show why the issue matters	Delays are repeated at the same handoff stage.
2. Cause	Explain the reason	Notes are inconsistent, so ownership is unclear.
3. Recommendation	Present the solution	Test a shared checklist for one month.
4. Expected result	Explain value	Fewer repeated questions and clearer responsibility.
5. Action request	Ask for the next step	Approve the trial and choose an owner.

Sample preview:

I will cover four points. First, I will show where the delays occur. Then I will explain the main cause. After that, I will recommend a one-month checklist trial. Finally, I will ask for your approval and confirm the next step.

Optional model reference: for another structure, compare the Project Results Briefing Models. Results briefings often move from objective to evidence to recommendation.

Mini example: Options-based decision structure

Purpose: ask which format to use for a short decision meeting.

Section	Example content
Situation	The audience has 15 minutes and must approve one next step.
Options	Option A: live slide summary. Option B: one-page pre-read plus short live summary.
Criteria	The format must be quick, easy to read before the meeting, and safe to share.
Recommendation	Use the one-page pre-read plus short live summary because the audience needs time to review the detail before deciding.

This is a short model, not a full appendix presentation. Use it to understand the structure.

Practice 1: Match Purpose and Structure

Match each purpose to a useful structure.

Purpose	Structure
1. Recommend a small process change	A. Objective - current status - issue - next step
2. Report the results of a pilot	B. Problem - cause - solution - action
3. Compare two possible tools or formats	C. Question - evidence - meaning - implication
4. Give a project update	D. Situation - options - criteria - recommendation

Practice 2: Convert a Weak List into an Outline

Weak list:

- current workflow
- staff comments
- delay numbers
- new checklist
- schedule
- approval

Rewrite the list as a structured outline. Choose one structure:

- Problem - cause - solution - action
- Situation - options - criteria - recommendation
- Objective - current status - issue - next step

Then add one transition phrase between each section.

Practice 3: Build a Planning Map

Complete the planning map for your own presentation.

Planning area	Your notes
Introduction	
1. Audience	
2. Audience outcome	
3. Core message	
4. Best structure	
Body	
1. Main point 1	
2. Evidence or example	
3. Main point 2	
4. Evidence or example	
5. Main point 3 or next section	
6. Evidence or example	
Conclusion	
1. Summary of key points	
2. Action, decision, or close	

Check your map with these questions:

- Does every section support the core message?
- Does every main point have an example, evidence, or clear explanation?
- Is the order easy for a listener to follow?
- Is any detail too small for the main presentation?
- Is the action or decision clear?

Speaking Task

Explain your structure to a partner in 60 seconds.

Use this sequence:

1. My purpose is to...
2. The structure I chose is...
3. I chose this structure because...
4. First, I will...
5. Then, I will...
6. Finally, I will...
7. The action or decision is...

Your partner listens for flow and asks one question:

- Why does this point come first?
- What evidence will you use here?
- Is this detail necessary for the audience?
- What should the audience do at the end?

Learner Deliverable

Submit a full presentation outline with:

- purpose and audience outcome
- core message
- chosen structure
- main sections in order
- evidence or examples for each section
- action, decision, or closing point
- one detail you will keep ready for Q&A, an appendix, or a follow-up document

Unit Wrap-Up

Structure is not decoration. It is how you make your thinking visible to the audience. A clear structure helps listeners understand what is important, how ideas connect, and what action comes next.

In the next unit, you will add signposting language so the structure is clear when you speak.

Unit 4: Business English for Signposting

Good presentations are easy to follow while people are listening. Signposting helps your audience understand where you are, why a point matters, and what comes next. It is not decoration. It is listener support.

In this unit, you will build the language that connects your outline into a clear spoken presentation.

Learning Outcomes

By the end of this unit, you can:

1. Use natural phrases to preview, transition, refer back, refer forward, emphasize, summarize, and close.
2. Choose formal, neutral, or conversational business register.
3. Avoid common false rules and translation traps in presentation English.

Core Concept: Guide the Listener

Your audience cannot reread your spoken message in real time, so your language needs to show the route. A strong outline is not enough if the connections are hidden.

Use signposting when you need to:

- preview the structure
- move to a new point
- refer back to an earlier point
- refer forward to a later point
- emphasize the most important information
- summarize before a decision or action
- close with a clear next step

Signposting should sound natural. Too little signposting makes the presentation hard to follow. Too much signposting can sound mechanical.

Presentation English Focus

Previewing Structure

Use a preview when the audience needs a simple map.

Function	Neutral business English
Give the structure	"I will cover three points: the current issue, the proposed change, and the next step."
Explain the sequence	"First, I will give the background. Then I will explain the recommendation."
Set up the outcome	"By the end, I would like us to agree on the next action."

First is the normal word for the first item in a sequence. At first usually means "in the beginning, but later something changed." For example: "At first, the process worked well, but volumes increased."

Moving Between Points

Transitions tell the audience that one part is finished and another part is starting.

Function	Useful phrases
Move to the next point	"Now I would like to move to the proposed change."
Connect cause and result	"Because of this delay, the team needs a clearer handoff."
Add a related point	"This also affects the review schedule."
Contrast two points	"However, the second option creates less extra work."
Acknowledge a risk or limit	"There is one limitation we should keep in mind."

Then is acceptable when it shows sequence clearly. It is weak only when every point starts with "then" and the logic is unclear.

Explaining Limits and Risk

Good business presentations do not hide weak points. Use clear language to show what the data can and cannot prove, or what risk the audience should consider.

Useful terms:

Term	Simple meaning
risk	something that may cause a problem
ownership	who is responsible for the next action
rollout	the planned introduction of a new process, service, or tool

Term	Simple meaning
controlled expansion	making a change wider in a careful, limited way
Function	Useful phrases
Limit a claim	"This suggests improvement, but it does not prove the full cause."
Show uncertainty	"The result is positive, but we should be careful about one point."
Name a risk	"The main implementation risk is staff workload."
Explain a safeguard	"To reduce that risk, we will start with a limited pilot."
Connect risk to action	"For that reason, I recommend a controlled expansion, not a full rollout."

Referring Back and Forward

References help the audience connect ideas across the presentation.

Function	Useful phrases
Refer back	"As I mentioned in the background section, the main issue is timing."
Refer forward	"I will come back to the cost estimate in the final section."
Link to a visual	"This is the same process you can see in the diagram."

Emphasizing a Key Point

Use emphasis to mark the information that the audience should remember.

Function	Useful phrases
Mark the key point	"The most important point is this: the current handoff is unclear."
Focus attention	"Please notice the change in the middle of the process."
State the business meaning	"This matters because it affects timing, ownership, and follow-up."

Summarizing and Closing

A close should not only signal that you are finished. It should leave the audience with the message and next action.

Weak close	Stronger close
"That's all."	"To summarize, the revised process reduces delay risk and gives the team clearer ownership."

Weak close	Stronger close
"Thank you for listening."	"My recommendation is to pilot this for one month and review the results in the next team meeting."
"Let's do this."	"I recommend that we approve the pilot today and assign one owner for the checklist."

Let's can sound collaborative, but it may be too vague for a recommendation. In business presentations, make the requested action clear.

Register Choices

Different audiences need different levels of formality. The same function can be expressed in several ways.

Function	More formal	Neutral	More conversational
Start a new point	"I would now like to turn to..."	"Now I will move to..."	"Let's look at..."
Emphasize	"I would like to highlight..."	"The key point is..."	"The main thing to notice is..."
Recommend	"I recommend that we..."	"My recommendation is to..."	"I think the best next step is..."
Close	"I would like to close by..."	"To close, I will summarize the next step."	"Let me finish with the action item."

Neutral business English is usually safest. It is clear, professional, and not too distant.

Role and Responsibility Vocabulary

Presentations often explain who does what. These phrases are similar, but they are not identical.

Phrase	Meaning	Example
responsible for	has duty or accountability	"The review team is responsible for final checks."
manage	controls or coordinates a process, team, or resource	"She manages the weekly reporting process."
lead	guides a project or activity	"He will lead the pilot review."

Phrase	Meaning	Example
take care of	handles a task, often practical or routine	"The support desk will take care of initial questions."
in charge of	has control or main responsibility	"The section manager is in charge of approval."

In charge of is not wrong. Use it when you mean that someone has control or main responsibility. Use responsible for when you want a more neutral business phrase.

Model: Adding Signposting to an Outline

Bare outline:

1. Current problem
2. Proposed change
3. Expected result
4. Requested action

Spoken version:

"I will cover four points today. First, I will explain the current problem. Then I will show the proposed change and the expected result. Finally, I will ask for approval for a short trial."

"The key point is that the current process creates delay because ownership is unclear."

"Now I would like to move from the problem to the proposed change."

"To summarize, the change is small, but it gives the team a clearer handoff. My recommendation is to trial it for one month and review the result."

For examples in business-client and government-agency contexts, see the Product, Service, or Program Launch Models and the Project Results Briefing Models.

Practice 1: Replace Stiff Phrases

Rewrite each phrase in more natural business English.

Stiff or weak phrase	Improved phrase
"I am going to explain about our problem."	
"Please hear my three contents."	

Stiff or weak phrase	Improved phrase
"Next, I will speak the solution."	
"This is all from me."	
"Let's approve this proposal."	

Use these options if you need support:

- "I will explain the current issue."
- "I will cover three points."
- "Now I will move to the solution."
- "To close, I would like to summarize the next action."
- "My recommendation is that we approve the proposal."

Spoken drill:

1. Choose two improved phrases from your answers.
2. Mark thought groups with slashes.
3. Underline the most important word in each phrase.
4. Say each phrase twice: once slowly, and once at presentation speed.

Practice 2: Add Signposting to Your Outline

Use the outline you made in Unit 3. Add one phrase for each function.

Function	Your phrase
Preview your structure	
Move to your second main point	
Refer back to an earlier point	
Refer forward to a later point	
Emphasize your key message	
Summarize and close	

Practice 3: Choose the Register

Choose the best phrase for each situation. Then compare your choices with a partner.

1. You are presenting to your own team in a regular meeting.
 - "I would now like to proceed to the second matter."
 - "Now I will move to the second point."
 - "Next thing."
2. You are presenting a recommendation to senior managers.

- “I recommend that we begin with a limited pilot.”
- “Let’s just try it and see.”
- “Maybe doing a pilot is kind of okay.”
- 3. You are closing a short internal update.
 - “That’s all.”
 - “To close, the next action is to confirm the schedule by Friday.”
 - “I have nothing more.”

Speaking Task: Signposting Rehearsal

Prepare a 60-second spoken preview and transition sequence for your presentation.

Include:

- one purpose statement
- one structure preview
- one transition to the second point
- one sentence that emphasizes your key message
- one closing action sentence

Partner feedback:

- Was the route easy to follow?
- Did any phrase sound too formal, too casual, or unclear?
- Did the close include a clear action?

Learner Deliverable

Submit the preview, transitions, references, and close for your presentation outline.

Minimum submission:

- structure preview
- two transition phrases
- one backward reference
- one forward reference
- one emphasis phrase
- one summary and action close

Unit Wrap-Up

Signposting is the language of structure. It does not replace a strong message, but it helps the audience hear the structure as you speak. Choose phrases that fit the audience, and make the next action clear.

Unit 5: Clear Visual Communication

Visuals should help the audience understand your spoken message. A good visual does not repeat every sentence you say. It shows the point, supports the explanation, and reduces the effort needed to follow you.

In this unit, you will redesign a visual so that it has one clear message, readable structure, and basic accessibility.

Learning Outcomes

By the end of this unit, you can:

1. Design visual support around one main message.
2. Improve readability through hierarchy, contrast, spacing, and concise text.
3. Apply basic accessibility principles to slides or visual materials.

Core Concept: One Visual, One Main Message

A visual needs a job. Before you design it, decide what the audience should notice or understand. Then make that message visible through the title, layout, and emphasis.

Use this sequence:

1. Write the takeaway message.
2. Choose the visual type.
3. Remove information that does not support the message.
4. Make the most important information easiest to see.
5. Check readability and accessibility.
6. Practice explaining the visual aloud.

This works for slides, PDFs, dashboards, one-page documents, worksheets, and screen-shared materials.

Presentation English Focus

When you show a visual, do not say only “This is a chart” or “Please look at this.” Tell the audience where to look and what to understand.

Function	Useful phrases
Introduce the	“This visual shows the proposed service flow.”

Function	Useful phrases
visual	
Direct attention	"Please focus on the three steps in the middle."
Explain layout	"The left side shows the current process, and the right side shows the revised process."
State the message	"The main point is that the new step catches problems earlier."
Connect to action	"This is why I recommend a short trial before full rollout."

Visual Design Principles

1. Takeaway Title

A topic title names the subject. A takeaway title states the message.

Topic title	Takeaway title
"Dashboard Pilot"	"The dashboard can reduce repeated status checks"
"Support Desk Flow"	"The support desk helps users before submission"
"Timeline"	"The pilot can start with a low-risk three-month rollout"

Use sentence-style capitalization unless your organization requires another style.

Watch article, plural, and noun-phrase problems in short visual text.

Weak title	Improved title	Why it is clearer
"Supplier dashboard status"	"The supplier-status dashboard reduces repeated questions"	Adds the, makes the noun phrase natural, and states the message
"Application return reason"	"Most returned applications have one missing attachment"	Uses plural applications and gives a clear finding
"Pilot schedule confirmation"	"The pilot can start next month after access is confirmed"	Turns an unclear noun phrase into a complete message

2. Hierarchy

Hierarchy means that the most important information is easiest to see first.

Use size, position, spacing, and contrast to create hierarchy.

Strong hierarchy:

- one clear title
- short labels
- grouped related items
- enough space between sections
- one or two emphasized elements

Weak hierarchy:

- many equal boxes
- long sentences inside small shapes
- several colors with no meaning
- crowded labels
- no clear starting point

Comparison task:

Weak visual	Clearer visual
Many equal boxes, long labels, crowded spacing, and no clear starting point.	One clear title, grouped steps, short labels, enough space, and one emphasized action.

A clearer visual guides the audience to the main point first.

3. Concise Text

Slide or visual text should not be a script. It should support your speaking.

Instead of:

“We are planning to launch a new dashboard that will help account managers check supplier-status issues more quickly and reduce the number of status-check emails they need to send to other teams.”

Use:

“Dashboard pilot: earlier issue visibility, fewer repeated status checks”

Then explain the full idea aloud.

4. Accessibility

Accessibility improves quality for everyone, not only for people with declared needs.

In this unit, accessibility means making the visual usable for people in the real presentation setting. A visual may be difficult to use because of small text, weak contrast, color-only meaning, a noisy background, missing alt text in a shared file, or missing captions/transcript support in recorded material.

Useful terms:

Term	Simple meaning
dashboard	one screen or visual page that shows key status information
takeaway title	a title that states the main message of a visual
accessibility	making material usable for people in the real presentation setting
rollout	the planned introduction of a new process, service, or tool

Check:

- Is the text readable from the expected viewing distance?
- Is there enough contrast between text and background?
- Is color supported by labels, shapes, or position?
- Is the title meaningful?
- Are charts and diagrams easy to understand without color alone?
- If the file is shared, does the meaningful visual need alt text?
- For recorded material, is there a transcript or caption plan?

Model: Visual Redesign

Weak visual text:

Title: “New service”

- We will introduce a new support process.
- Staff will answer questions.
- Users will submit better forms.
- Managers will review progress.
- The pilot will be three months.
- We need approval.

Improved visual:

Title: “The support process helps users before submission”

Three-step flow:

1. User checks form requirements.
2. Support desk answers common questions.
3. Review team receives fewer incomplete forms.

Action box:

“Approve a three-month pilot and review inquiry data monthly.”

Why it is stronger:

- The title states the message.

- The steps show the process.
- The action is separated from the explanation.
- The presenter can explain details aloud instead of reading long bullets.

For business-client and government-agency versions of this visual skill, see the Product, Service, or Program Launch Models.

Spoken Model: Explaining the Visual

“This visual shows the revised support flow. Please focus on the three steps in the middle. First, the user checks the requirements before submission. Then the support desk answers common questions, especially about attachments and required fields. Finally, the review team receives fewer incomplete forms. The main point is that support happens earlier in the process. That is why I recommend a three-month pilot with monthly data review.”

This model is about 45-60 seconds when spoken at a clear pace.

Practice 1: Diagnose the Weak Visual

Read the visual description below. Mark each issue.

Weak visual:

Title: “Project Information”

- 9 bullet points
- three font sizes with no clear meaning
- red and green labels only
- no clear main message
- small text in the bottom-right corner
- background image behind text

Checklist:

Issue	Yes/No	Repair idea
The title is only a topic		
The text is too dense		
The hierarchy is unclear		
Color is the only signal		
Contrast may be weak		
The visual does not support spoken explanation		

Practice 2: Rewrite the Visual Title

Change each topic title into a takeaway title.

Topic title	Takeaway title
"Supplier Status Dashboard"	
"Pilot Timeline"	
"Application Support Desk"	
"Process Change"	
"User Feedback"	

Use a complete message, but keep it short.

Practice 3: Rebuild a Readability Comparison

Create two text-only versions of the same visual. Readable slide text helps listeners understand the message while listening.

Sample A: weak version

- topic title
- crowded bullet list
- no clear visual grouping
- one accessibility problem

Sample B: improved version

- takeaway title
- 3-4 short labels
- clear grouping
- one action or conclusion
- accessibility repair

Use one of these role-agnostic topics:

- a revised workflow
- a new support process
- a project result
- a service rollout

Do not use confidential or real company data.

Practice 4: Explain Your Revised Visual Aloud

Prepare a 45-60 second explanation of your improved visual.

Use this frame:

“This visual shows...”

“Please focus on...”

“The left/right/top/bottom section shows...”

“The main point is...”

“This supports my recommendation because...”

Partner feedback:

- Could you understand the visual without reading every word?
- Did the speaker direct attention clearly?
- Did the spoken explanation add value beyond the visual text?
- Was the visual accessible enough for the likely setting?

Optional AI Critical-Literacy Task

Some tools can produce slides or visual drafts quickly, but the output may be generic, inaccurate, unreadable, or unsuitable for company information. The presenter remains responsible for the message, accuracy, language, confidentiality, copyright, and final spoken explanation.

Review this flawed generated slide text:

Title: “Amazing Results”

- Our service is the best solution.
- Customers will love it.
- Efficiency will increase a lot.
- The team should use AI for everything.

Questions:

1. Which phrases are too generic?
2. What information would need checking?
3. What confidentiality or company-policy questions might apply?
4. Rewrite the title and two bullets in learner-owned English.

Do not use this task to create your final assessed visual. Use it to practice critique and revision.

Learner Deliverable

Submit one accessible slide, document section, dashboard mockup, or other visual draft for your presentation.

Include:

- a takeaway title
- short labels or concise text
- clear hierarchy
- contrast and readability check
- note about color use
- alt-text awareness note if the file will be shared
- 45-60 second spoken explanation notes

Unit Wrap-Up

Clear visuals make the spoken message easier to understand. They do not replace the presenter. Design the visual around one main message, check that it is readable and accessible, and practice explaining what the audience should notice.

Unit 6: Data, Charts, and Evidence

Data becomes useful in a presentation only when the audience understands the point. A chart should not make people search for the message. It should support a clear spoken explanation.

In this unit, you will choose a simple evidence format, write a takeaway title, and explain a chart aloud with careful business English.

Learning Outcomes

By the end of this unit, you can:

1. Choose an appropriate chart or evidence format for a simple business point.
2. State the takeaway of a chart before explaining details.
3. Explain trends, comparisons, and limits clearly.

Core Concept: Takeaway Before Detail

Many presenters start with chart details: numbers, axes, colors, and categories. The audience first needs the business meaning.

Use this order:

1. State the takeaway.
2. Identify what the chart shows.
3. Explain the most important number, trend, or comparison.
4. Add a limit or caution if needed.
5. Connect the evidence to the recommendation or next step.

This order helps you avoid reading every number on the chart.

Presentation English Focus

Introducing Evidence

Function	Useful phrases
Introduce the chart	"This chart shows returned applications before and after the trial."
State the takeaway	"The main takeaway is that returns fell during the trial period."
Explain the	"The figures show the number of cases per month."

Function	Useful phrases
measure	
Label fictional data	"The data in this practice chart is fictional."
Mention a source	"The figures come from our internal monthly summary."

Trends and Changes

Function	Useful phrases
Increase	"The number increased from 68 to 86."
Decrease	"Late document handoffs fell from 38 to 27."
No major change	"The total stayed almost the same."
Approximation	"This is about a 25 percent decrease."
Comparison	"The second process took six minutes less on average."

Careful Claims

Use cautious language when the data is limited.

Too strong	More careful
"This proves the new process works."	"This suggests that the new process helped reduce delays."
"The problem is solved."	"The result is positive, but two issues remain."
"We will always save time."	"We can expect some time savings if the volume stays similar."

Careful language is especially important when the audience may challenge the evidence.

Choosing the Right Evidence Format

Choose the format that matches the question.

Data question	Useful format
Did the number go up or down over time?	line chart or simple before/after bars
Which category is largest?	bar chart
How do two results compare?	paired bar chart or small table
What changed in a process?	before/after process diagram

Data question	Useful format
What is the schedule?	timeline
What are the main issues?	ranked list or simple table

Do not use a complex chart because it looks impressive. Use the simplest format that makes the point clear.

Useful terms:

Term	Simple meaning
checkpoint	a fixed time or step when people check status
rollout	the planned introduction of a new process, service, or tool
dashboard	one screen or visual page that shows key status information
status-check message	a message asking what has happened or what is still open
intake	the first step when an office receives an application or request

Model: Before/After Chart Explanation

Practice chart data: fictional for classroom use.

Title:

“Returned applications fell after the intake checklist trial”

Data:

Measure	Before trial	After trial
Returned applications	142	111
Repeat inquiries	86	68
Average intake time	4 min 20 sec	5 min 00 sec

Spoken explanation:

“This chart shows three results from the intake checklist trial. The data is fictional for practice. The main takeaway is that returned applications fell after the checklist was introduced. Returns decreased from 142 to 111, and repeat inquiries also fell from 86 to 68. There was one trade-off: average intake time increased by about 40 seconds. So the result is positive, but we need to monitor counter waiting time if we expand the checklist.”

This explanation gives the message first, explains the most important numbers, and includes a limitation.

For examples in business-client and government-agency contexts, see the Project Results Briefing Models.

Practice 1: Match the Chart Type

Choose the best format for each purpose.

Purpose	Best format	Reason
Show monthly inquiry volume for six months		
Compare current process time and revised process time		
Show the top three reasons for returned forms		
Explain where a new checkpoint enters a workflow		
Show a three-month rollout plan		

Options:

- line chart
- bar chart
- paired bar chart
- process diagram
- timeline

Practice 2: Improve a Weak Chart

Weak chart description:

- title: “Data”
- five colors with no labels
- small axis text
- six categories, but only two are discussed
- no source or fictional-data note
- presenter reads every number

Repair the chart plan.

Problem	Repair
Weak title	
Too many colors	
Small labels	
Too much data	

Problem	Repair
Missing data note	
Weak spoken explanation	

Practice 3: Write a Takeaway Title

Write a takeaway title for each data set. The data is fictional for practice.

Data	Topic title	Takeaway title
Late document handoffs fell from 38 to 27 after a workflow pilot.	"Late document handoffs"	
Repeated status-check messages fell by 30 percent during a dashboard pilot.	"Messages"	
Returned applications fell, but intake time increased by 40 seconds.	"Application trial"	
User satisfaction improved from 3.6 to 4.1 out of 5.	"Feedback results"	

Practice 4: Explain a Chart in 60-90 Seconds

Use your own simple chart or one of the fictional data sets below.

Option A: workflow data, fictional for practice

Fictional practice data: late document handoffs decreased during the pilot.

Measure	Before pilot	After pilot
Late document handoffs	38	27
Average rework time	22 min	16 min
Users reporting clearer ownership	48%	82%

Option B: service data, fictional for practice

Fictional practice data: returned applications decreased during the checklist trial.

Measure	Before pilot	After pilot
Online form inquiries	312	265
Repeat visits or calls	87	63
Users served by support desk	0	146

Prepare your explanation with this frame:

1. “This chart shows...”
2. “The data is fictional for practice.” or “The figures come from...”
3. “The main takeaway is...”
4. “The most important change is...”
5. “One limit or caution is...”
6. “This supports the next step because...”

Partner feedback:

- Did the speaker state the takeaway before the details?
- Did the speaker explain the key number or comparison clearly?
- Did the speaker avoid reading every number?
- Did the speaker include a source or fictional-data note?
- Did the speaker use careful language for limits?

Evidence Challenge

In Q&A, someone may question your data. Prepare one response for each situation.

Challenge	Response frame
“Is the improvement large enough?”	“It is a moderate improvement, but it matters because...”
“Could the result be due to lower volume?”	“That is possible, so we should also check...”
“Where did the figures come from?”	“The figures come from...”
“Can we rely on this result?”	“We should treat it as an early result because...”

Learner Deliverable

Submit one chart explanation for your presentation.

Include:

- one simple chart, table, or evidence visual
- a takeaway title
- a source note or fictional-data label
- 60-90 second spoken explanation notes
- one limitation or caution sentence
- one possible Q&A response about the evidence

Unit Wrap-Up

Evidence is not only numbers on a page. It is a spoken business point supported by clear data. Choose a simple format, write the message in the title, explain the key comparison, and state limits honestly.

Unit 7: Tool-Neutral Slide and Document Workflow

Presentations often fail because the material is prepared for the wrong situation. A slide deck may be useful in a live meeting, but a short PDF, dashboard walkthrough, worksheet, or pre-read may be clearer for another audience. In this unit, you choose the format and support materials that help your listeners understand, decide, or act.

Learning Outcomes

By the end of this unit, you can:

- choose a suitable visual or document format for a presentation context
- explain the role of slides, notes, pre-reads, worksheets, follow-up handouts, and backup materials
- prepare basic export, compatibility, accessibility, and confidentiality checks

Core Concept: Choose the Medium from the Purpose

A presentation is not a file type. It is a communication event. Before you build slides or documents, decide what the audience needs during the meeting and what they may need before or after it.

Use this tool-choice checklist:

Question	What to check
Audience	Who will listen, and what do they need to decide or do?
Delivery mode	Will the presentation be in person, online, hybrid, or recorded?
Collaboration	Will other people edit, comment, or approve the material?
Data source	Is the information stable, live, confidential, or still changing?
Visual complexity	Do listeners need a simple overview, a chart, a workflow, or detailed evidence?
Accessibility	Can people read, hear, and follow the material in the actual setting?
Export	Do you need PDF, shared document, printed copy, or offline backup?
Confidentiality	Does the material contain company, client, account, personal, or

Question	What to check
	restricted information?

Presentation English Focus

Use clear language to explain the role of each material.

Useful terms:

Term	Simple meaning
pre-read	short material sent before a meeting or presentation
follow-up handout	material sent or given after a presentation
backup material	extra detail kept ready in case the audience needs it
fallback file	another file you can use if the main file does not work
sanitized	changed to remove sensitive or identifying information
Function	Useful language
Introduce a pre-read	"I sent a short pre-read so we can use today for discussion."
Refer to a live visual	"Please look at the workflow on this page."
Explain a handout or worksheet	"This worksheet is for your notes during the discussion."
Refer to a follow-up handout	"After the meeting, I will send a one-page summary with the next steps."
Explain backup material	"The detailed data is in the appendix if we need it."
Explain confidentiality	"The examples here use fictional data, so no client or personal information is included."
Move to a fallback file	"If the shared file does not open, I have a PDF version ready."

Model: Choosing the Right Material

Scenario: You need to present a process improvement proposal in a 20-minute internal meeting. The audience must decide whether to approve a short pilot.

Material	Role
One-page pre-read	Gives the background before the meeting
Live visual pack	Shows the problem, recommendation, and expected result
Presenter notes	Keeps the presenter on track without reading a script

Material	Role
Appendix page	Holds extra detail for possible questions
PDF fallback	Protects the meeting if the editable file or platform fails
Follow-up summary	Confirms the decision and next steps

Sample explanation:

“I sent the one-page background note yesterday, so I will not read it today. In the live presentation, I will focus on the current workflow, the proposed change, and the pilot decision. The detailed cause table is in the appendix if we need it during Q&A.”

Optional model reference: For a banking/leasing or general trading-company version, see the business-client model in the Process Improvement Briefing Models. For a government-agency version, compare the government-agency model in the same model set.

Example visual messages:

Context	Useful visual	Message the visual should make clear
Business-client process improvement	Before/after workflow	The revised workflow makes handoff ownership visible before the deadline.
Government-agency process improvement	Before/after intake process	The checklist moves error prevention to the first contact point.

When you create your own version, show only the steps that help the audience understand the decision. Keep detailed process rules, screenshots, or data tables as backup material.

Practice 1: Choose the Format

Choose the best main format for each situation. Then explain your choice in one sentence.

Situation	Possible format choices
A manager needs a quick update before approving next steps.	short slide pack / one-page memo / dashboard walkthrough
A team must complete a planning task during the meeting.	worksheet / long report / appendix only
A senior audience wants to review	pre-read plus short live summary / live demo

Situation	Possible format choices
details before a short decision meeting.	only / informal chat
A remote audience needs a short update they can watch later.	recorded briefing with captions or transcript / printed handout only / complex live dashboard

Sentence frame:

“For this situation, I would use ___ because the audience needs ___.”

Practice 2: Plan Your Visual Pack

Complete the table for your own presentation or a course case.

Material	Will you use it?	Purpose	Check needed
Pre-read	yes / no		
Live slides or visual pack	yes / no		
Dashboard or document walkthrough	yes / no		
Worksheet	yes / no		
Follow-up handout	yes / no		
Appendix or backup pages	yes / no		
PDF fallback	yes / no		

Useful check words: readability, access permission, version, file size, links, fonts, data source, confidentiality, offline copy.

Practice 3: Backup and Security Check

Before an important presentation, a professional presenter checks the materials, not only the speaking notes.

Mark each item: Done, Not needed, or Still needed.

Check	Status
The file is saved in an approved location.	
A PDF fallback is ready.	
Fonts, charts, media, and links work after export.	
The file opens on the meeting device or platform.	

Check	Status
A copy is available offline if allowed by company policy.	
Sensitive information has been removed or masked.	
Images, charts, and templates have acceptable source or license status.	
Text is readable and does not depend on color alone.	

Speaking Task

Prepare a 45-60 second explanation of your material choices. Use at least three expressions from the language table.

Structure:

1. State the presentation situation.
2. Explain the main live material.
3. Explain one support material.
4. Mention one backup, access, or confidentiality check.

Example start:

“For this presentation, I will use a short visual pack during the meeting because the audience needs to compare two options quickly...”

Learner Deliverable

Submit a visual pack plus notes plan. It should include:

- the main presentation format
- any pre-read, worksheet, appendix, follow-up handout, or backup material
- one sentence explaining the role of each material
- a completed backup and confidentiality checklist

Unit Wrap-Up

Good presentation materials are chosen, not assumed. A clear workflow helps you match the format to the audience, protect confidential information, and avoid technical problems that distract from your message.

Unit 8: Delivery: Voice, Presence, Movement, and Notes

Strong content needs clear delivery. Listeners follow your message more easily when your voice, pauses, posture, and notes support the structure of the presentation. This unit helps you rehearse a short segment so you sound prepared without reading every word.

Learning Outcomes

By the end of this unit, you can:

- use thought groups, stress, pace, and pauses to make spoken English easier to follow
- turn a full script into usable presenter notes
- deliver a rehearsed 3-minute segment with professional presence in person, online, or hybrid

Core Concept: Delivery Makes Structure Audible

Listeners cannot reread your spoken message. They need signals while you speak. Your voice can show what is important, where one point ends, and where the next point begins.

A thought group is a short group of words that expresses one idea. Marking thought groups helps you pause naturally instead of reading word by word.

Example:

“Today / I will explain the current problem, / show two causes, / and recommend a short pilot.”

The slash marks are not for the final notes. They are a rehearsal tool.

Presentation English Focus

Use delivery to support these common presentation moves.

Move	Example language	Delivery focus
Opening	“Today, I will focus on one issue: response time.”	Pause after “one issue”
Transition	“Let me move to the second cause.”	Slightly slower pace

Move	Example language	Delivery focus
Emphasis	"The most important point is ownership."	Stress "most important" and "ownership"
Recovery	"Let me say that another way."	Calm pace, short pause
Closing	"So I recommend a four-week pilot."	Clear stress on the action

Notes, Not a Reading Script

A full script can help you prepare, but it is usually too heavy for delivery. Presenter notes should remind you of the message, not replace speaking.

Full script	Better presenter notes
"The first reason we need to revise the workflow is that the current handoff is unclear, especially after 3 p.m."	Reason 1: unclear handoff after 3 p.m.
"This creates rework because staff have to check the same information again."	Effect: rework, repeated checks
"For that reason, I recommend one shared handoff point."	Action: shared handoff point

Useful note format:

- keyword
- number or evidence
- transition phrase
- warning: slow down, pause, show visual

Model: Marked Delivery Segment

Text for rehearsal:

"Today / I will explain why the current process is creating delays. / The main issue is not staff effort. / The issue is unclear ownership between steps. / I will show one workflow visual, / then recommend a short pilot."

Presenter notes:

- purpose: explain delays
- key contrast: effort is not the issue; ownership is
- visual: workflow
- action: short pilot
- delivery reminder: pause before contrast

Optional model reference: For both a banking/leasing or general trading-company version and a government-agency version, compare the Process

Improvement Briefing Models. Notice how both scripts use pauses, contrast, and a clear pilot request.

Practice 1: Mark Thought Groups

Mark the thought groups with slashes. Then underline the words you want to stress.

1. Today I will show the result of our pilot and recommend the next step.
2. The data is fictional for practice but the presentation problem is realistic.
3. We reduced repeated inquiries but we still need a clearer follow-up process.
4. I will not go through every detail now because the appendix has the full table.

After marking, practice each sentence twice:

- first slowly, with clear pauses
- then at a natural meeting pace

Practice 2: Reduce a Script to Notes

Change the script into presenter notes.

Script:

“The first point is the current situation. At the moment, the team spends too much time answering repeated status questions. This does not mean people are careless. It means the information is difficult to find quickly.”

Presenter notes:

- Point 1:
- Problem:
- Important clarification:
- Cause:
- Delivery reminder:

Practice 3: Presence in Different Settings

Delivery changes with the room and platform, but the goal is the same: help people follow you.

Setting	What to check
---------	---------------

Setting	What to check
In person	Stand where the audience can see you and the visual. Do not block the screen. Use natural eye contact across the room.
Online	Look at the camera for key points, not only at your notes. Check microphone, lighting, screen share, and captions if used.
Hybrid	Include both room and remote listeners. Repeat or summarize room questions for remote participants.
Async recording	Use shorter sections, clearer transitions, and a transcript or caption plan where possible.

Pointer and cursor control:

- Use a pointer, cursor highlight, digital pen, highlighter, annotation, or zoom only when it helps the listener find information.
- If you use a laser pointer in a room, point only at the screen or wall. Do not point it at people, cameras, reflective surfaces, or screens close to someone's eyes.
- In online or hybrid delivery, use the cursor, highlight tool, or zoom briefly. Do not move the cursor constantly while speaking.
- If you write or annotate during the presentation, write only a few words or marks. Do not cover important text or data.
- Pause before pointing, point to the area, then explain the meaning.

Speaking Task

Prepare a 3-minute segment from your own presentation or a course case.

Your segment should include:

- a short opening or transition
- one visual or document reference
- one important point with clear stress
- one recovery phrase in case you need it
- notes with keywords, not full sentences

Partner feedback:

Check	Feedback
I could hear the structure.	yes / partly / not yet
The pauses helped me follow the message.	yes / partly / not yet
The speaker used notes without reading.	yes / partly / not yet
The visual reference was clear.	yes / partly / not yet

Check	Feedback
One delivery strength was...	
One next improvement is...	

Learner Deliverable

Submit a rehearsed 3-minute segment plan:

- your presenter notes
- one marked sentence showing thought groups and stress
- one delivery goal for voice
- one delivery goal for posture, eye contact, cursor use, or movement
- peer feedback notes

Unit Wrap-Up

Delivery is not performance decoration. It is how your message becomes easy to understand in real time. Good notes, clear thought groups, and controlled movement help you sound prepared and natural.

Unit 9: Online, Hybrid, and Asynchronous (Async) Delivery

Online, hybrid, and recorded presentations need more than the same slides on a different screen. The audience may have weaker attention, different audio quality, chat messages, screen-share limits, or no chance to ask live questions. This unit helps you adapt one presentation for a remote or recorded setting.

Learning Outcomes

By the end of this unit, you can:

- adapt an in-person presentation plan for online, hybrid, or asynchronous (async) delivery
- use clear language for screen sharing, chat, captions, remote Q&A, and technical problems
- prepare a short recorded or storyboarded version with accessibility and timing in mind

Core Concept: Design for Attention and Access

In a room, listeners can see you, the screen, and the group atmosphere. Online or hybrid audiences receive less context. Recorded audiences receive even less because they cannot ask you to clarify in real time.

In this unit, asynchronous (async) means recorded or prepared for people to use later, without live interaction.

Adapt your delivery by checking three things:

1. Access: Can the audience see, hear, open, and understand the material?
2. Attention: Is the structure clear enough for a screen-based audience?
3. Interaction: How will people ask questions, respond, or follow up?

Presentation English Focus

Use practical online language before, during, and after screen sharing.

Useful terms:

Term	Simple meaning
------	----------------

Term	Simple meaning
asynchronous (async)	recorded or prepared for people to use later, without live interaction
screen share	showing your screen to the audience in an online meeting
transcript	written text of spoken words
fallback	another option you can use if the first plan does not work
Function	Useful language
Start online	"Before I start, can you hear me clearly?"
Explain screen sharing	"I am going to share the summary page now."
Check visibility	"Please let me know if the chart is too small on your screen."
Manage chat	"You can add quick questions in the chat, and I will pause after this section."
Include remote participants	"For those joining online, I will repeat the question before I answer."
Use captions or transcript	"A transcript will be shared after the recorded version."
Handle a technical problem	"The screen share seems delayed, so I will switch to the PDF version."
Close async	"If you have questions after watching, please send them by Friday."

Model: Adapting a Results Briefing

Original situation: You planned an 8-minute in-person results briefing with one before/after chart and a short recommendation.

Online adaptation:

- reduce the opening background to 45 seconds
- use a larger chart title and fewer labels
- pause after the result slide for chat questions
- keep the detailed table in an appendix or follow-up file
- prepare a PDF fallback
- repeat questions before answering

Async adaptation:

- record a 4-minute version
- state the purpose and action request in the first 30 seconds
- use clear section transitions

- add captions or prepare a transcript
- end with a follow-up instruction

Sample transition:

“I will pause here because this is the main result. If you are joining live, please add questions in the chat. If you are watching the recorded version, the supporting table is linked in the follow-up note.”

Optional model reference: For a banking/leasing or general trading-company version, see the business-client model in the Project Results Briefing Models. For a government-agency version, compare the government-agency model in the same model set.

Practice 1: Online and Hybrid Checklist

Choose one presentation you have planned. Mark each item: Ready, Need to check, or Not needed.

Online delivery needs setup checks before the presentation begins.

Check	Status
Camera and microphone are tested.	
Lighting makes the speaker visible.	
Screen share works with the correct file or window.	
Presenter notes are visible only to the presenter.	
The audience can read charts and small text on screen.	
Chat or reactions have a clear role.	
Captions, transcript, or accessibility support is considered.	
Remote Q&A plan is clear.	
A PDF or backup file is ready.	
Timing is shorter or more structured than the in-person version.	

Practice 2: Adapt the Opening

Rewrite the in-person opening for an online or hybrid audience.

In-person opening:

“Today I will report the pilot results and recommend the next step. I will start with the objective, then show the main result, and finish with my recommendation.”

Online or hybrid version:

“Before I start, . **Today I will** . I will pause after ____ so you can ____.”

Async version:

“This short recording explains . **By the end, you should know** . If you have questions after watching, ____.”

Practice 3: Plan a Short Async Version

A recorded version usually needs to be shorter and more explicit than a live version. Complete the storyboard for a 3-4 minute recording.

Time	Content	Visual or document	Spoken signpost
0:00-0:30	Purpose and audience value		
0:30-1:30	Main situation or result		
1:30-2:30	Evidence or example		
2:30-3:30	Recommendation or next step		
Final 15 seconds	Follow-up action		

Accessibility check:

- Can the audience understand the recording without watching every visual detail?
- Are captions or a transcript planned where possible?
- Is any chart readable on a laptop screen?
- Is confidential or restricted information removed?

Practice 4: Remote Q&A Language

Match the situation to a useful response.

Situation	Response
A participant writes a detailed question in chat.	“Thank you. I will answer the main point now and follow up on the details after checking the numbers.”
A room participant asks a question during a hybrid	“I will repeat the question for the online participants first.”

Situation	Response
meeting.	
Screen sharing stops.	"I will switch to the PDF version and continue from the summary page."
No one asks a question.	"I will give everyone a moment. One common question about this result is..."

Now write two remote Q&A responses for your own topic.

Speaking Task

Practice a 2-minute online or hybrid segment. Include:

- one online opening or housekeeping phrase
- one screen-share or visual reference
- one planned pause for questions or chat
- one backup phrase for a technical problem

If you choose async delivery, record or rehearse a 2-minute segment and prepare a one-sentence follow-up instruction.

Learner Deliverable

Submit one adapted online, hybrid, or async version of your presentation plan:

- the selected mode
- an adaptation checklist
- a revised opening
- one screen-share, chat, caption, transcript, or Q&A plan
- one backup or contingency phrase
- a short storyboard or rehearsal note

Unit Wrap-Up

Remote and recorded delivery works best when the presenter designs for access, attention, and interaction. Clear language, readable visuals, planned pauses, and backup materials help the audience stay with the message even when the setting changes.

Unit 10: Q&A, Challenge Handling, and Interaction

Questions are part of the presentation, not an interruption after it. In a workplace presentation, the audience may need to check details, test your recommendation, compare risks, or understand what should happen next. A strong presenter listens for the purpose behind the question and answers in a way that keeps the discussion useful.

This unit helps you prepare for questions before the final presentation. You will build a response bank, practise short answers, and handle disagreement without becoming defensive.

Learning Outcomes

By the end of this unit, you can:

- identify the purpose behind common audience questions
- clarify, answer, defer, and follow up using professional English
- respond to skepticism or disagreement while keeping control of the interaction

Core Concept: Answer the Real Question

Audience questions often have two layers. The surface question is the exact words you hear. The real question is the concern behind those words.

Surface question	Possible real concern	Good response move
How much time will this take?	Workload may increase.	Answer directly, then explain the limit.
Why are you recommending this option?	The evidence may not be strong enough.	Bridge to criteria or data.
What if this does not work?	Risk and fallback plans matter.	Acknowledge the risk and explain the next step.
Can you guarantee the result?	The claim may sound too strong.	Limit the claim and state what you can measure.
Who approved this?	Authority or ownership is unclear.	Clarify status and decision owner.

Before you answer, pause for one full breath. This gives you time to decide whether you should answer directly, clarify first, defer, or check satisfaction after your answer.

Presentation English Focus

Use short, controlled phrases. Long answers often sound less confident because the listener has to search for your main point.

Clarifying the Question

- Could I check what you mean by “timeline” here?
- Are you asking about the pilot period or the full rollout?
- Do you mean the cost for our team, or the cost for the whole department?
- Just to confirm, your main concern is the extra workload. Is that right?

Answering Directly

- The short answer is yes, but only for the pilot stage.
- No, this will not replace the current report. It will support it.
- We expect the first review to take about two weeks.
- Based on the fictional practice data, the largest issue is handoff timing.

Structuring a Longer Answer

- There are two points to consider. First, ... Second, ...
- I would separate that into cost and timing.
- Let me answer that in three steps: what changes, what stays the same, and what we will measure.

Bridging to Evidence

- The reason I recommend this is the pattern in the data.
- If we look at the before-and-after comparison, the main change is clear.
- This is why the pilot result matters.
- The evidence does not prove everything, but it does support a controlled next step.

Deferring Safely

- I do not have that number with me, so I should not guess.
- I need to check that with the process owner before I give you a final answer.
- That depends on company policy, so I will confirm it and follow up.

- I can answer the general point now, and I will send the exact figure after the meeting.

Handling Disagreement

- I see your concern. My recommendation is still to start with a limited pilot.
- That is a fair challenge. The reason I would not stop here is ...
- I agree that the risk exists. The question is how we control it.
- We may be looking at different priorities. From the audience outcome we agreed on, the key point is ...

Checking Satisfaction and Follow-Up

- Does that answer your question?
- Is that the level of detail you needed?
- I will send the source note after the meeting.
- I will confirm the owner and come back to you by Friday.

Model: Improving Weak Q&A Responses

The following examples use fictional workplace situations for practice.

Audience question	Weak response	Stronger response
Will this add another reporting task?	Maybe, but it is not too much.	The short answer is no. The pilot uses the existing weekly summary, but adds one shared status field so ownership is clearer.
Why should we trust this result?	Because the chart shows improvement.	The result is limited because it is only a four-week pilot. However, the before-and-after comparison shows fewer delays and lower rework time, so I recommend a controlled expansion.
Can we use real client examples in the dashboard?	I think that is fine.	I would not include real customer names in a practice or shared sample. We should use fictional or approved sanitized data and follow company policy.
What if the checklist slows down the counter line?	It probably will not.	That is a real risk. For the trial, we should measure both returned forms and intake time. If waiting time increases too much, we should revise the checklist.

Notice that the stronger answers do not avoid the problem. They answer, limit the claim, and explain the next action.

Practice Task 1: Classify the Question

Read each question and choose the main function.

Functions: clarify details, challenge evidence, ask about workload, ask about risk, ask about ownership, ask for follow-up.

1. Who will update the shared file after the pilot starts?
2. Are these numbers from all teams or only one team?
3. What happens if the new process creates more work at month-end?
4. Can you send the revised timeline after this meeting?
5. Is the result large enough to justify changing the workflow?
6. How many staff hours will this require each week?

Now write one sentence you could use before answering each question.

Practice Task 2: Build a Response Bank

Use your own developing presentation. Prepare answers for six likely questions.

Question type	Likely question for my presentation	My first response sentence
Clarification		
Evidence Challenge		
Workload or cost		
Risk or limitation		
Ownership or next step		
Follow-up request		

Keep each first response sentence short. You can add details after the first sentence, but the first sentence should show control.

Practice Task 3: Skeptical-Question Role Play

Work in groups of three: presenter, questioner, observer.

1. The presenter gives a 90-second summary of the recommendation or result.
2. The questioner asks two skeptical but professional questions.
3. The presenter answers using at least two target phrases from this unit.

4. The observer checks whether the presenter answered directly, limited claims, and confirmed follow-up where needed.
5. Change roles.

Use skeptical questions that are realistic, not hostile. The goal is to practise pressure without turning the exchange into an argument.

Optional Model References

For a business-client version, see the Process Improvement Briefing Models or Project Results Briefing Models. Use only fictional or sanitized banking/leasing or general trading-company operations examples, such as workflow timing, reporting quality, procurement coordination, shipment reporting, or control handoff. Do not create investment advice, securities-market predictions, real identifying client/account/order/shipment/transaction details, or regulatory interpretation.

For a government-agency version, see the government-agency models in the Process Improvement Briefing Models or Project Results Briefing Models. Keep the focus on service delivery, process, reporting, coordination, or administrative follow-up.

Learner Deliverable: Q&A Response Bank

Submit a response bank for your final presentation. It should include:

- six likely audience questions
- the purpose behind each question
- your first response sentence
- one evidence point, limitation, or follow-up action for each answer
- two safe deferral phrases you can use if you do not know an answer

Speaking Task: Q&A Rehearsal

Give a 2-minute preview of your final presentation and answer three questions from classmates. After each answer, ask a short satisfaction check, such as “Does that answer your question?” or “Would you like more detail on that point?”

Your spoken English output for this unit is the recorded or observed Q&A exchange plus your revised response bank.

Unit Wrap-Up

Good Q&A is not about having an instant answer for every possible question. It is about listening accurately, answering what you can answer, limiting what you cannot prove, and following up professionally. Your final presentation will require Q&A, so your response bank is part of your preparation, not an optional extra.

How This Helps Your Final Presentation

This unit helps you prepare for the Q&A part of your final presentation. You need to show that you understand the question, answer clearly, handle limits honestly, and use appropriate business English under pressure.

Unit 11: Final Rehearsal and Peer Feedback

Rehearsal is where a presentation becomes usable. Reading through your slides or visual pack once is not enough because problems often appear only when you speak: the opening feels too long, a transition is unclear, a chart takes too much time, or your notes pull your eyes away from the audience.

This unit gives you a structured rehearsal process. You will practise the full presentation, receive focused peer feedback, and revise your message, visuals, language, delivery, and Q&A plan before the final presentation.

Learning Outcomes

By the end of this unit, you can:

- rehearse a full presentation with visuals, notes, timing, and Q&A preparation
- give and receive focused peer feedback using clear business English
- revise your presentation based on evidence from rehearsal

Core Concept: Rehearsal Is a Repair Process

A useful rehearsal has a purpose. Do not only ask, “Was it good?” Ask what you need to repair.

Rehearsal focus	What to check	Repair action
Message	Is the main point clear after the opening?	Rewrite the opening or takeaway titles.
Structure	Can listeners follow the sequence?	Add or shorten transitions.
Evidence	Is the data explained before details become confusing?	State the takeaway first.
Visuals	Do visuals support the spoken message?	Reduce text, improve hierarchy, or move details to backup material.
Spoken English	Are key phrases natural and intelligible?	Practise thought groups, stress, and sentence frames.
Delivery	Do notes support speaking	Shorten notes and mark pauses.

Rehearsal focus	What to check	Repair action
	rather than reading?	
Q&A	Are likely questions prepared?	Revise the response bank.
Timing	Is the presentation within the limit?	Cut detail, not the core message.

Rehearsal should produce decisions. After each run-through, choose a small number of changes and make them before you rehearse again.

Presentation English Focus

Peer feedback needs tact and precision. Vague comments such as “It was nice” or “More energy” do not help the presenter revise.

Giving Feedback

- Your main message was clear when you said ...
- I understood the structure, but the transition to the data section was sudden.
- The chart title helped me understand the point before the details.
- I needed more context before the recommendation.
- The visual was readable, but the labels were small from the back of the room.
- Your answer to the second question was direct, but you could add one follow-up action.

Asking for Feedback

- Could you focus on my opening and first transition?
- Did the chart explanation sound clear?
- Where did you feel I gave too much detail?
- Which part should I cut if I need to save one minute?
- Did my Q&A answer sound direct enough?

Responding to Feedback

- That is useful. I will shorten the background section.
- I see the issue. I will move that detail to the appendix.
- I will keep the point, but I will change the wording.
- I am not sure I can cut that example, but I can make it shorter.
- I will rehearse that transition again.

Timing Language

- I am currently about 40 seconds over the limit.
- I can save time by shortening the explanation of the process.
- I should not cut the recommendation because it is the action point.
- I need a shorter answer for this likely Q&A question.

Model: Rehearsal Notes After One Run-Through

Presentation purpose: request approval for a four-week pilot of a revised workflow.

Time limit: 6 minutes plus Q&A.

Rehearsal result:

Area	Observation	Revision decision
Opening	Clear context, but purpose came too late.	Move the action request into the first 30 seconds.
Structure	Problem and evidence were clear. Recommendation section was too short.	Add one sentence explaining what changes during the pilot.
Visuals	Workflow visual was useful but crowded.	Remove two labels and move details to backup material.
Spoken English	"We suggest to" sounded unnatural.	Use "We recommend starting with..."
Delivery	Presenter looked at notes during Q&A.	Practise first response sentences without reading.
Timing	6 minutes 45 seconds.	Cut one background example.

Notice that each comment leads to a specific action. This is the difference between useful feedback and general opinion.

Practice Task 1: Prepare Your Rehearsal Target

Before you rehearse, complete this checklist.

Item	Ready?	Note
Presentation purpose is clear		
Core message is in the opening		
Structure has clear transitions		

Item	Ready?	Note
Visual pack or equivalent materials are ready		
Data or evidence has a takeaway statement		
Presenter notes are short enough to use while speaking		
Q&A response bank has at least six likely questions		
Timing target is written down		
Backup or follow-up material is identified		

Choose two focus areas for peer feedback. For example: opening and timing, chart explanation and Q&A, or visual readability and transitions.

Practice Task 2: Peer Feedback Cycle

Work in groups of three or four.

1. Presenter gives the full presentation or an agreed rehearsal section.
2. Peers listen with the feedback checklist.
3. Presenter asks two focused feedback questions.
4. Peers give evidence-based feedback using target language.
5. Presenter writes three revision decisions.

Use this feedback form.

Feedback area	What I noticed	Suggested repair
Message and audience fit		
Structure and transitions		
Evidence and visuals		
Spoken English and delivery		
Timing		
Q&A preparation		

Practice Task 3: Revise Your English

Choose three sentences from your opening, transitions, chart explanation, close, or Q&A response bank. Improve them for natural spoken English.

Current sentence	Problem	Revised spoken version
	too long / too indirect / unclear grammar /	

Current sentence	Problem	Revised spoken version
	unnatural phrase	
	too long / too indirect / unclear grammar / unnatural phrase	
	too long / too indirect / unclear grammar / unnatural phrase	

Read the revised sentences aloud. Mark thought groups with slashes and underline one stressed word in each thought group.

Example:

We recommend / a four-week pilot / because most delays / come from unclear handoffs.

Practice Task 4: Final Q&A Check

Exchange your response bank with a partner. Your partner should ask three questions:

- one clarification question
- one evidence or risk question
- one follow-up or next-action question

Answer without reading full sentences from your notes. You may look at keywords, but your answer should sound spoken, not read aloud.

Optional Model References

For a business-client rehearsal, compare your presentation with the business-client models in the Process Improvement Briefing Models, Product, Service, or Program Launch Models, or Project Results Briefing Models. Keep examples focused on operations, reporting, workflow, service quality, or control handoff.

For a government-agency rehearsal, compare your presentation with the government-agency models in the Process Improvement Briefing Models, Product, Service, or Program Launch Models, or Project Results Briefing Models. Keep examples focused on administrative tasks, service delivery, reporting, coordination, or process improvement.

Use these models as references for structure and language, not as scripts to copy.

Learner Deliverable: Revised Full Presentation

Submit a revised presentation package that includes:

- final presentation brief or purpose statement
- visual pack or equivalent materials
- presenter notes
- Q&A response bank
- peer feedback form
- revision log with at least three specific changes

The revision log should show what changed and why.

Change made	Reason for change	Evidence from rehearsal

Speaking Task: Timed Rehearsal

Deliver the full presentation with visuals and notes. The target is 5-7 minutes plus required Q&A, unless your course has a different requirement. After the presentation, answer at least two questions from classmates.

Your spoken English output for this unit is the timed rehearsal, the Q&A practice, and three revised spoken sentences marked for thought groups and stress.

Unit Wrap-Up

The final presentation should not be a first performance. By this point, you should know where your message is strong, where listeners need more guidance, which visuals need repair, and which questions you are likely to receive. Use the rehearsal evidence to make targeted changes.

How This Helps Your Final Presentation

This unit helps you make final improvements before assessment. Peer feedback is practice, not your final score, but your revision decisions can improve your message, audience fit, structure, evidence, visuals, spoken English, delivery, Q&A, timing, professionalism, accessibility, and reflection.

Unit 12: Final Presentation and Reflection

The final presentation brings together the work from the course: audience purpose, core message, structure, visuals, evidence, tool choice, delivery, Q&A, and reflection. The goal is not a perfect performance. The goal is a complete business presentation that shows clear thinking, learner-owned English, and professional preparation.

In this unit, you will deliver your final presentation with visuals or equivalent presentation materials, answer audience questions, and reflect on your next development steps.

Learning Outcomes

By the end of this unit, you can:

- deliver a complete business presentation with visuals or other appropriate materials
- handle required Q&A using prepared strategies and natural spoken English
- evaluate your performance and set specific next-step goals

Core Concept: Complete the Communication Cycle

A presentation is complete only when the audience understands the message and knows what should happen next. The final task therefore includes three parts:

1. the presentation itself
2. the Q&A interaction
3. the reflection after delivery

The reflection matters because presentation skill develops through evidence. You need to notice what worked, what did not work, and what you should practise next.

Final Presentation Requirements

Your teacher will confirm the exact time limit and format. Unless your course has different instructions, prepare a 5-7 minute presentation plus required Q&A:

- a business presentation with a clear audience and purpose
- visuals, a visual pack, document walkthrough, dashboard walkthrough, or other appropriate presentation materials
- a clear opening, body, and close
- at least one evidence point or data explanation
- accessible visual choices, including readable text and clear contrast
- presenter notes that support speaking without becoming a script
- required Q&A
- a short self-review after delivery

Use fictional or sanitized data unless your teacher has approved a real source. Do not include confidential company, client, account, order, shipment, transaction, ticket, staff, applicant, or personal data.

Presentation English Focus

Use language that helps the audience follow the complete presentation.

Final Opening

- Today I will explain the current issue, the evidence, and the action I recommend.
- My purpose today is to request approval for a limited pilot.
- By the end, I would like you to understand the options and agree on the next step.
- This presentation focuses on the process, not individual performance.

Transitions

- I will start with the current situation.
- Let me move to the evidence behind the recommendation.
- The next point is what this means for our workflow.
- Before I close, I want to explain the expected risk and follow-up plan.

Evidence and Visual Explanation

- This chart uses fictional data for practice.
- The main takeaway is shown in the title.
- The comparison suggests improvement, but it does not prove the full-year result.
- Please focus on the change between the first and second columns.

Recommendation or Action Close

- For these reasons, I recommend starting with a controlled pilot.

- The action I am asking for today is approval to test this process for four weeks.
- If we agree today, the next step is to confirm the owner and timeline.
- I will send the follow-up summary after the meeting.

Q&A

- Could I clarify one point before I answer?
- The short answer is yes, with one condition.
- I do not have the exact number here, so I will check and follow up.
- That is a fair concern. The way I would manage it is ...

Reflection

- My strongest point was ...
- I need to improve ...
- The audience seemed clear about ...
- I lost time when ...
- My next language goal is ...
- My next presentation-skill goal is ...

Model: Final Task Checklist

Use this checklist before you present.

Area	Check
Audience and purpose	I know who the presentation is for and what I want them to know, decide, or do.
Message	My core message appears early and clearly.
Structure	The sequence matches the purpose: problem-solution, results-next steps, options-recommendation, or another clear structure.
Evidence	I explain one or more evidence points with a clear takeaway and appropriate limits.
Visuals or materials	My materials are readable, accessible, and useful for the spoken message.
Tool and format	My format fits the setting, and I have a backup or follow-up plan.
Spoken English	I have prepared openings, transitions, explanations, close, and Q&A phrases.
Delivery	I can use notes without reading word for word.
Timing	I have rehearsed within the 5-7 minute target or the time limit set

Area	Check
	by my teacher.
Q&A	I have prepared likely questions and safe deferral phrases.
Professionalism	My data, names, and examples are fictional, sanitized, sourced, or approved.

Language-Level Check: B1 and B2

Use this table to check the English in your final presentation. Your teacher may adapt these descriptions for your class.

Area	B1 performance	B2 performance
Structure language	Uses clear prepared phrases for opening, sequence, and close.	Uses signposting flexibly and connects points smoothly.
Evidence language	Explains one simple evidence point with basic numbers or examples.	Explains evidence, limits the claim, and connects it to the recommendation.
Interaction	Answers expected questions with prepared phrases and asks for clarification when needed.	Handles follow-up questions, limits claims, and confirms next actions more independently.
Spoken control	Speaks clearly enough to follow, with pauses and some repaired mistakes.	Speaks with better pace, stress, and recovery when wording becomes difficult.

The goal is not to use difficult English. The goal is to make your message clear, accurate enough, and useful for the audience.

Practice Task 1: Final Preparation Review

Complete the table before your final presentation.

Question	My answer
Who is my audience?	
What should they know, decide, or do by the end?	
What is my core message?	
What structure am I using?	
What is my strongest evidence point?	
Which visual or material is most important?	

Question	My answer
Which part is most likely to be difficult in English?	
What question am I most likely to receive?	
What will I do if I do not know an answer?	

Practice Task 2: One-Minute Readiness Check

Before the final presentation, give a one-minute readiness check to a partner.

Include:

- your purpose
- your core message
- your structure
- your main evidence point
- your expected Q&A challenge

Your partner should listen for clarity, not content detail. If the partner cannot identify your main message after one minute, revise your opening.

Final Presentation Task

Deliver your final presentation using your chosen visuals or presentation materials. Unless your teacher gives different instructions, aim for 5-7 minutes plus required Q&A. Your presentation should show the cumulative work from the course.

During Q&A:

- listen fully before answering
- clarify if needed
- answer directly when you can
- limit claims when evidence is incomplete
- defer safely when you should not guess
- confirm follow-up where appropriate

Your spoken English output for this unit is the final presentation, the required Q&A exchange, and the reflection discussion or written self-review.

Learner Deliverable

Submit or complete:

- your final presentation materials
- the delivered presentation

- the required Q&A exchange
- the textbook wrap-up quiz
- the self-review or reflection notes

Optional Model References

For a business-client model, compare your work with the business-client models in the Process Improvement Briefing Models, Product, Service, or Program Launch Models, or Project Results Briefing Models. Use these only for structure, language, and delivery reference. Sanitized shipment, order, procurement, supplier-status, and workflow examples are acceptable. Avoid investment advice, securities-market predictions, real identifying client/account/order/shipment/transaction details, or regulatory/legal interpretation.

For a government-agency model, compare your work with the government-agency models in the Process Improvement Briefing Models, Product, Service, or Program Launch Models, or Project Results Briefing Models. Keep the focus on administrative tasks, service delivery, reporting, coordination, or process improvement.

Self-Review

Complete the self-review after your presentation.

Area	Reflection question	My notes
Message clarity	Was my main point clear early enough?	
Audience fit	Did I connect the topic to audience needs?	
Structure	Could listeners follow the sequence?	
Evidence	Did I explain the data or evidence clearly and honestly?	
Visual effectiveness	Did my materials support the spoken message?	
Spoken English	Which phrases worked well? Which phrases need practice?	
Delivery	Did I use voice, pauses, notes, and eye contact effectively?	
Q&A	Did I understand and answer the questions professionally?	

Area	Reflection question	My notes
Timing	Did I stay within the 5-7 minute target or the time limit set by my teacher?	
Professionalism	Did I protect confidentiality and use appropriate examples?	
Accessibility	Were my visuals and delivery easy to follow?	

Practice Task 3: Textbook Wrap-Up Quiz

Use this quiz to review the main learning points from the course.

Part A: Choose the Best Answer

Choose the best word or phrase to complete each sentence.

Question	A	B	C
1. Before you prepare content, decide the ____: what the audience should know, decide, or do.	audience outcome	font size	animation
2. A strong presentation needs a clear ____, not only a topic.	software tool	core message	background color
3. To recommend a small workflow change, a useful structure is ____.	problem - cause - solution - action	question - evidence - meaning - implication	random list - examples - close
4. A good chart title should often state the ____.	takeaway	file format	speaker's opinion only
5. A short document sent before a meeting so people can prepare is a ____.	pre-read	fallback file	Q&A
6. If you do not know an answer in Q&A, use a ____.	safe deferral	stronger claim	new main point

Part B: Repair the Language

Rewrite each sentence so it is clearer and more professional.

1. "I will use PowerPoint because presentations always need PowerPoint."
2. "This chart proves our project is successful forever."
3. "I don't know. Next question."

4. “That’s all.”

Part C: Check the Presentation Plan

Read the short plan. Then answer the questions.

Topic: new shared checklist

Opening: “I will explain many things about our current work.”

Body: current process, examples, staff comments, new checklist, schedule, possible risks

Close: “Please think about it.”

1. What is weak about the opening?
2. Which Unit 3 structure would fit this topic?
3. What vocabulary might need explanation before the presentation?

Next-Step Goals

Write two goals for your next presentation.

One language goal:

- In my next presentation, I will improve ...
- I will practise this by ...

One presentation-skill goal:

- In my next presentation, I will improve ...
- I will practise this by ...

Make each goal specific enough to practise. “Speak better” is too general. “Use clearer transitions between evidence and recommendation” is specific.

Final Presentation Checklist

Your final presentation should show these qualities:

Category	Evidence
Message clarity	Core message, opening, final delivery
Audience fit	Relevance to audience purpose and needs
Structure	Clear sequence and signposting
Evidence	Accurate, limited, and understandable evidence explanation
Visual effectiveness	Readable and purposeful visuals or materials
Spoken English	Intelligibility, register, transitions, explanations, Q&A language

Category	Evidence
Delivery	Voice, pace, notes, posture, eye contact, movement, or online presence
Q&A	Required question handling and response quality
Timing	Delivery within the 5-7 minute target or the required local time limit
Professionalism	Preparation, confidentiality, appropriate data and examples
Accessibility	Materials and delivery are easy to follow
Reflection	Honest self-review and specific next-step goals

Peer feedback from Unit 11 is formative. The final assessment is based on the delivered presentation, required Q&A, submitted materials, and self-review.

Unit Wrap-Up

You have built the final presentation step by step: audience, message, structure, visuals, evidence, format, delivery, Q&A, rehearsal, and revision. The final task asks you to use those parts together in learner-owned English. After the presentation, the reflection helps you turn one performance into the starting point for the next one.

Process Improvement Briefing Models

These two model presentations show how a presenter can recommend a practical workflow change. Use them as references for audience outcome, problem-solution-recommendation structure, workflow visuals, document choices, implementation-risk Q&A, and a clear final action request.

The data in both models is fictional for practice. Do not replace it with real client, account, transaction, applicant, staff, or personal information.

How to Use These Models

Read the full spoken model first. Then use the notes, vocabulary, visuals, and Q&A examples to understand how the presentation is built.

When you prepare your own presentation, do not copy the script word for word. Use it as a model for structure, useful phrases, clear visuals, and handling questions.

Model 1: Business Client - Reducing Import Document Handoff Delays

Scenario Brief

Seika Global Trading Operations is a fictional general trading-company operations team. The Yokohama Import Documentation Desk handles shipping-document preparation for imported industrial parts. The team has too many same-day import document handoff delays because exception checks are split across email, spreadsheet tracking, and manual handoff messages. A typical exception is a missing packing-list confirmation from Supplier A before the 3:00 p.m. shipping-document preparation cutoff. The presenter recommends a shared exception log and a fixed 2:15 p.m. handoff checkpoint before the daily cutoff window.

This is an operations workflow briefing. It does not recommend securities trades, investment products, market predictions, or legal/regulatory action.

Audience:

- operations manager
- risk/control representative
- documentation team lead
- account-service representative

Purpose:

- request approval for a four-week pilot of the revised workflow
- confirm who owns the shared exception log
- agree how the pilot result will be reviewed

Audience outcome:

By the end of the presentation, the audience should decide whether to approve a four-week pilot and assign owners for the daily checkpoint.

Core message:

A shared exception log and one fixed handoff checkpoint will reduce avoidable document handoff delays without changing the control process.

Expected delivery time:

- Spoken presentation: about 6.5 to 7.5 minutes
- Q&A: 4 minutes

Suggested Visual Sequence

Visual	Purpose	Suggested content
1. Title and decision	Set the purpose	"Decision today: approve a four-week workflow pilot"
2. Current workflow	Show where the problem happens	Supplier A packing-list issue moving through email, spreadsheet, and message channels before ownership is confirmed
3. Problem snapshot	Give simple fictional evidence	38 late document handoffs; 61% linked to unclear handoff notes; 22 minutes average rework time
4. Proposed pilot workflow	Explain the change	One shared exception log; three required fields; fixed 2:15 p.m. checkpoint before cutoff preparation
5. Pilot plan and owners	Make the request practical	Four-week timing, documentation lead as checkpoint owner, exception owner, control review
6. Decision and review	Close with action	Approve pilot, confirm owner, review late document handoffs and rework time

Visual note: use a before/after workflow diagram as the main visual. A small evidence box is enough. Do not make this a data-heavy chart presentation.

Sample Slide Set

Sample slide deck: [Process Improvement Business-Client Deck](#)

Key Vocabulary Before Listening

Term	Simple meaning
exception	a case that does not follow the normal process and needs extra checking
handoff	the point where responsibility moves from one person or team to another
checkpoint	a fixed time or step when people check status
cutoff	the final time when one step must be ready for the next step
rework	work that must be done again because something was unclear or incomplete
pilot	a small test before wider use
control process	the required checking and approval steps

Full Spoken Model Script

Opening

Good morning. I am asking for one decision today: approval for a four-week pilot to reduce same-day import document handoff delays.

The issue is not one large failure. It is a repeated handoff problem. At the moment, exception checks are recorded in several places: email, a spreadsheet, and short handoff messages. For example, when Supplier A has not confirmed a packing-list item by early afternoon, one person may see the email, another person may update the spreadsheet, and a third person may ask about the next action in chat. Because the information is spread across these places, ownership is not always clear before the 3:00 p.m. shipping-document preparation cutoff.

The decision has three parts: should we approve the pilot, who should own the daily checkpoint, and what result should we review at the end?

My main message is simple. A shared exception log and one fixed handoff checkpoint can reduce avoidable document handoff delays without changing the control process.

Current Problem

The risk appears in the current workflow.

Please look at the left side of the workflow visual. Today, an exception may first appear in an email, such as a missing packing-list confirmation. Then a team member may add a note in the tracking spreadsheet. Later, another person may send a short message to ask who owns the next action.

Each of these steps is understandable. The problem is that the handoff note is not in one reliable place. When the team is busy, people spend time checking where the latest information is. That creates rework, and it can delay the confirmation process.

So the main problem is not the number of checks. We still need the checks. The main problem is where the handoff information sits and when ownership is confirmed.

Evidence

Last month, there were 38 late document handoffs. Of those, 61% involved missing or unclear handoff notes. Also, the average rework time was 22 minutes per exception.

This does not mean every delay came from the same cause. Some delays have different reasons. But the handoff issue is large enough and repeated enough to justify a small pilot.

For that reason, I do not recommend a large system change now. I recommend a limited workflow change that we can test quickly and control carefully.

Recommendation

The proposed pilot changes that handoff point, not the control process.

The pilot has two parts.

First, we use one shared exception log. Every open exception has three required fields: the issue, the owner, and the next action. This is not a new management report. It is a shared handoff record.

Second, we set one fixed checkpoint at 2:15 p.m., before the 3:00 p.m. shipping-document preparation cutoff. At that checkpoint, the documentation lead checks the open items, confirms ownership, and asks each owner to update the next action.

The control process does not change. Approval authority does not change. The pilot only standardizes where the handoff note is recorded and when ownership is checked.

Expected Benefit

The expected benefit is clearer ownership before the busy part of the day.

If ownership is clear earlier, the team should spend less time searching email threads or asking the same question again. For instance, if the Supplier A packing-list issue already has an owner and next action in the log, the account-service representative does not need to send another status-check message at 2:45 p.m. We should also reduce avoidable late document handoffs. The pilot target is a 25% reduction in late document handoffs during the four-week period.

I want to be careful about this target. It is not a promise, and it is not a market or client result. It is an operational test target. The purpose is to see whether the workflow change reduces delay and rework in a controlled way.

Pilot Plan

Here is the proposed pilot plan.

In week zero, before the pilot starts, the risk/control representative reviews the log fields. This check is important because we do not want the log to create a new control risk.

In weeks one to four, the documentation lead runs the daily 2:15 p.m. checkpoint. Each exception owner updates their own item before the checkpoint. The account-service representative can view the log to understand status, but customer names, account, shipment, or order numbers, shipment IDs, and ticket IDs must not appear in the pilot material.

At the end of week four, we review three things: the number of late document handoffs, the average rework time, and user feedback on ownership clarity.

The backup material is a simple cause breakdown table and a short roles list. I will not go through those now, but they are available if we need them during Q&A.

Close

The decision is limited, but useful.

We have a repeated handoff problem. The information is spread across email, spreadsheets, and short messages. The proposed pilot keeps the control

process unchanged, but moves the handoff note into one shared exception log and checks ownership at a fixed time.

So my request is approval for the four-week pilot, confirmation that the documentation lead owns the daily checkpoint, and agreement that we will review late document handoffs and rework time at the end of the pilot.

If we agree today, we can prepare the log fields this week and start the pilot next Monday. Thank you. I am happy to take your questions.

Language Notes

Useful phrases:

- “The issue is not one large failure. It is a repeated handoff problem.”
- “I am asking for one decision today...”
- “The decision has three parts...”
- “The proposed pilot changes that handoff point, not the control process.”
- “I want to be careful about this target.”
- “Today I am asking for approval for...”

Language focus:

- Use “I recommend...” or “My recommendation is...” for a direct but polite proposal.
- Use “does not change” to reduce concern about risk, authority, or workload.
- Use “pilot” when the action is limited and temporary.

Vocabulary:

- exception: a case that does not follow the normal process and needs extra checking
- handoff: the point where responsibility moves from one person or team to another
- checkpoint: a fixed time or step when people check status
- rework: work that must be done again because something was unclear or incomplete

Pronunciation and Intelligibility Notes

Chunk key sentences into short thought groups:

- “The issue / is not one large failure. / It is a repeated handoff problem.”
- “The control process / does not change.”
- “Today / I am asking for approval / for the four-week pilot.”

Word stress:

- confirmation: con-fir-MA-tion
- exception: ex-CEP-tion
- operations: op-er-A-tions
- ownership: OWN-er-ship
- checkpoint: CHECK-point

Japanese-learner note: do not add extra vowel sounds at the end of words such as “risk,” “pilot,” “log,” and “desk.” Keep final consonants clear but short.

Delivery note: pause before the decision request. This helps the audience hear exactly what you need.

Q&A Model Answers

Clarify the question

Question: Are you asking the team to create another daily report?

Answer: Do you mean the workload for updating the log, or the number of reports managers receive? The log is not intended to be a new management report. It is a shared handoff record for open exceptions.

Answer directly

Question: Who owns the log each day?

Answer: The documentation lead owns the daily checkpoint, and each exception owner updates their own item before the checkpoint. That keeps ownership close to the work.

Bridge to evidence

Question: Why focus on handoff notes first?

Answer: The strongest reason is the cause breakdown. In the measured example, 61% of late document handoffs involved missing or unclear handoff notes, so this is the most direct place to start.

Acknowledge risk or limitation

Question: Could the shared log create a control risk?

Answer: That is an important risk to check. The pilot does not change the control checks or approval authority. It only standardizes where the handoff note is recorded. We should also ask the control representative to review the log fields before the pilot starts.

Defer safely

Question: Will this work for all desks?

Answer: I cannot confirm that from this pilot alone. The first pilot should test one workflow. If the result is positive, the next step is to compare it with two other desks before a wider rollout.

Confirm follow-up or next action

Question: What do you need from us today?

Answer: Today I need approval for the four-week pilot, confirmation of the checkpoint owner, and agreement that we will review late document handoffs and rework time at the end of the pilot.

Privacy, Security, Accessibility, and Contingency Notes

Privacy and security:

- Use fictional desk names only.
- Do not show real customer names, account, shipment, or order numbers, shipment IDs, ticket IDs, proprietary system names, or internal control findings.
- Remove hidden comments and metadata before sharing slides or PDFs.
- Keep the backup cause table sanitized.

Accessibility:

- Make the workflow diagram readable without color alone.
- Use labels such as “current” and “pilot” in addition to color.
- Keep small numbers in a simple evidence box, not a dense table.
- Provide a PDF fallback if the live deck does not open.

Contingency:

- If the workflow visual fails, describe the current process verbally as three channels: email, spreadsheet, and short messages.
- If time is cut, deliver only the opening, recommendation, pilot plan, and decision request.
- If a question needs confidential detail, defer it to a closed follow-up with the appropriate owner.

Skills You Can Practise

Unit connection	Skill shown in this model
Unit 1: Audience, Purpose, and Workplace Context	Audience outcome, decision need, workplace purpose
Unit 2: Message, Objective, and Relevance	Core message, relevance, and action-focused opening
Unit 3: Structure and Flow	Problem-solution-recommendation structure

Unit connection	Skill shown in this model
Unit 7: Tool-neutral Slide and Document Workflow	Workflow visual, backup material, confidentiality checks, PDF fallback
Unit 10: Q&A, Challenge Handling, and Interaction	Clarifying, direct answers, risk acknowledgement, safe deferral, follow-up
Unit 12: Final Presentation and Reflection	Decision-oriented workplace presentation with a clear close

Model 2: Government Agency - Reducing Returned Application Forms

Scenario Brief

Midori Ward Administrative Services Office is a fictional government-agency administrative office. The office receives many housing support certificate applications with missing attachments or incomplete fields. Some applications are submitted at the counter, and some are submitted online. Staff return the forms after review, which creates delays and repeat inquiries, especially during the Monday morning counter peak. The presenter recommends a front-counter checklist and a shared FAQ sheet for common errors.

This is an administrative process-improvement briefing. It does not discuss politics, legislation, public-policy advocacy, or budget campaigning.

Audience:

- section manager
- counter-service staff
- document-review staff
- inquiry desk representative

Purpose:

- request approval for a one-month trial of a new intake checklist
- confirm how staff will use the checklist
- assign ownership for updating the shared FAQ

Audience outcome:

By the end of the presentation, the audience should decide whether to approve the one-month trial and assign an owner for the FAQ update process.

Core message:

A front-counter checklist will reduce returned applications and shorten processing time by catching common errors before formal review.

Expected delivery time:

- Spoken presentation: about 6.5 to 7.5 minutes
- Q&A: 4 minutes

Suggested Visual Sequence

Visual	Purpose	Suggested content
1. Title and decision	Set the purpose	"Decision today: approve a one-month intake checklist trial"
2. Current intake process	Show where delays begin	Counter or online submission, formal review, returned form, repeat inquiry
3. Problem snapshot	Give simple fictional evidence	142 returned applications; 54% missing one attachment; 31% incomplete contact or ID field
4. Checklist-supported process	Explain the change	Quick intake check, complete forms to review, FAQ for common explanations
5. Trial plan and ownership	Make the request practical	Housing support certificate applications, one month, FAQ owner, staff reminders
6. Decision and review	Close with action	Approve trial, agree checklist fields, assign FAQ owner

Visual note: use a process-flow visual as the main visual. Do not use flags, seals, emblems, crests, or country-specific government symbols.

Sample Slide Set

Sample slide deck: [Process Improvement Government-Agency Deck](#)

Key Vocabulary Before Listening

Term	Simple meaning
intake	the first step when an office receives an application or request
counter	a service point where staff speak with users face to face
formal review	the official check after intake
returned application	an application sent back because information is missing or incorrect
FAQ	a list of frequently asked questions and standard answers
high-volume	handled many times or in large numbers

Term	Simple meaning
trial	a small test before wider use

Full Spoken Model Script

Opening

Good afternoon. Please keep one question in mind as I speak: can a short intake checklist reduce returned forms without slowing the counter too much?

At the moment, many housing support certificate forms are returned after formal review because one attachment is missing or one field is incomplete. This creates extra work for staff, and it also creates a longer wait for applicants.

At the end, I will ask you to approve a one-month trial, agree on the first checklist fields, and assign one owner for the FAQ update process.

My main message is this. A front-counter checklist can reduce returned applications and shorten processing time by catching common errors before formal review.

Current Problem

The service impact starts in the current intake process.

Please look at the first process flow. An applicant submits the form at the counter or online. Counter staff receive it and send it to formal review. Review staff then find missing information, such as a missing income certificate attachment or an incomplete contact field. The application is returned, and the applicant often contacts the office again.

This means the problem appears late in the process. By the time review staff find the missing item, the applicant has already left the counter or finished the online submission. Staff then need to explain the problem again, and the applicant needs to send or bring the missing information later.

The process is careful, but it is not efficient for common preventable errors.

Evidence

Last month, there were 142 returned housing support certificate applications. Of those, 54% were missing one required attachment. Another 31% had an incomplete contact or ID field.

These numbers show that many returns come from a small number of common problems. We do not need to redesign the whole application process first. We can start with the most common preventable errors at intake.

The target for the trial is a 20% reduction in returned applications for one high-volume application type. This is a trial target, not a guarantee. We will review the result after one month.

Recommendation

The trial design is small on purpose.

The proposal has two parts.

First, counter staff use a short intake checklist before the form goes to formal review. The checklist is not a second full review. It covers only the income certificate attachment, the contact field, the ID field, and one confirmation item.

Second, staff use one shared FAQ sheet for common explanations. The FAQ helps staff explain missing attachments and incomplete fields in the same way. This should make the guidance clearer for applicants and more consistent for staff.

The formal review process does not change. Review staff still make the official review decision. The checklist only helps us catch simple errors earlier.

Expected Benefit

The expected benefit is fewer returned forms and fewer repeat inquiries.

If staff catch common errors at the counter, applicants can correct some problems earlier. For example, an applicant who forgot the income certificate can receive the same clear explanation before the file goes to formal review. Review staff should receive more complete forms. The inquiry desk should also receive fewer repeat questions about the same missing information.

There is one important risk. The checklist may add time at the counter. For that reason, the checklist must be short. During the trial, we should measure both returned applications and counter time. If the checklist slows the line too much, we should shorten it before wider use.

Trial Plan

Here is the proposed trial plan.

In week zero, we agree the checklist fields and prepare the shared FAQ. The document-review team confirms the required items, and the inquiry desk representative prepares the first FAQ version.

In weeks one to four, counter staff use the checklist for housing support certificate applications. Temporary staff receive a short reminder sheet before the Monday morning peak, and the section manager checks any repeated questions once a week.

At the end of the month, we review four points: the number of returned applications, the main reasons for return, repeat inquiry volume, and staff comments on counter time.

The backup material includes a return-reason table, draft checklist fields, and a proposed FAQ update schedule. I will not show all of that detail now, but it is available if we need it during Q&A.

Close

Here is the service case for the trial.

Returned applications create delay for applicants and extra work for staff. In this scenario, most returns come from a small number of preventable errors. A short intake checklist and shared FAQ can help staff catch these errors before formal review.

The approval I need today is for the one-month trial, the first checklist fields, and one owner for the FAQ update process.

If we approve the trial today, we can prepare the checklist this week, brief staff next week, and review the result after one month. Thank you. I am happy to take your questions.

Language Notes

Useful phrases:

- “The process is careful, but it is not efficient for common preventable errors.”
- “The checklist is not a second full review.”
- “The formal review process does not change.”
- “There is one important risk.”
- “Please keep one question in mind as I speak...”
- “At the end, I will ask you to...”
- “The trial design is small on purpose.”
- “The approval I need today is...”

Language focus:

- Use “not a second full review” to answer workload concerns.
- Use “only” to limit the task: “It covers only...”
- Use “before formal review” to show where the process changes.
- Use “one high-volume application type” to make the trial limited and realistic.

Vocabulary:

- intake: the first step when an office receives an application or request
- formal review: the official check after intake
- returned application: an application sent back because information is missing or incorrect
- FAQ: a list of frequently asked questions and standard answers
- high-volume: handled many times or in large numbers

Pronunciation and Intelligibility Notes

Chunk key sentences into short thought groups:

- “The checklist / is not a second full review.”
- “The formal review process / does not change.”
- “Today / I am asking for approval / for the one-month trial.”

Word stress:

- application: ap-pli-CA-tion
- attachment: at-TACH-ment
- incomplete: in-com-PLETE
- applicant: AP-pli-cant
- administrative: ad-MIN-is-tra-tive

Japanese-learner note: “application” and “applicant” have different stress. Say ap-pli-CA-tion for the form or request, and AP-pli-cant for the person.

Delivery note: when explaining the process flow, point to one step, pause, and then speak. Do not read every box on the visual.

Q&A Model Answers

Clarify the question

Question: Are you asking staff to review every application twice?

Answer: Do you mean a full review, or a quick intake check? The proposal is only a quick intake check. Formal review still happens later.

Answer directly

Question: Who updates the FAQ?

Answer: The inquiry desk representative should own the FAQ update, with monthly input from document-review staff. That gives us one owner and a regular update cycle.

Bridge to evidence

Question: Why focus on attachments and contact fields?

Answer: The return-reason data shows that these two issues explain many returns. Missing attachments were 54% of returns, and incomplete contact or ID fields were 31%, so the checklist should start there.

Acknowledge risk or limitation

Question: Will the checklist slow down the counter line?

Answer: That is the main implementation risk. The trial should measure both returned applications and counter time. If the checklist adds too much time, we need to shorten it before any wider use.

Defer safely

Question: Can we use the checklist for all application types?

Answer: I would not recommend that yet. This trial should cover one high-volume application type first. After one month, we can decide whether it is suitable for other forms.

Confirm follow-up or next action

Question: What decision do you need today?

Answer: Today I need approval for the one-month trial, agreement on the checklist fields, and one owner for the FAQ update process.

Privacy, Security, Accessibility, and Contingency Notes

Privacy and security:

- Use fictional applicant examples only.
- Do not show real names, addresses, ID numbers, application numbers, staff names, or personal circumstances.
- Do not include hidden comments or draft applicant data in shared files.
- Keep the return-reason table general and sanitized.

Accessibility:

- Write checklist items in plain language.
- Make the process visual readable in grayscale.
- Do not use color as the only signal for complete and incomplete forms.

- Avoid flags, seals, emblems, crests, and country-specific government symbols.
- If the checklist becomes staff guidance later, check text size, contrast, and screen-reader-friendly file structure where practical.

Contingency:

- If the process visual fails, describe the current process verbally as four steps: submit, review, return, inquire again.
- If the meeting runs short, give only the problem, recommendation, trial plan, and decision request.
- If a question asks for personal or case-specific details, answer at process level and offer a private follow-up with authorized staff.

Skills You Can Practise

Unit connection	Skill shown in this model
Unit 1: Audience, Purpose, and Workplace Context	Audience outcome, administrative purpose, decision need
Unit 2: Message, Objective, and Relevance	Core message, applicant/staff relevance, action-focused opening
Unit 3: Structure and Flow	Problem-solution-recommendation structure
Unit 7: Tool-neutral Slide and Document Workflow	Process visual, trial plan, backup material, accessibility checks
Unit 10: Q&A, Challenge Handling, and Interaction	Clarifying, direct answers, workload risk, limits, follow-up
Unit 12: Final Presentation and Reflection	Decision-oriented workplace presentation with a clear close

Compare the Two Models

Both variants teach the same presentation skill: identify a repeated process problem, recommend a limited pilot or trial, explain the expected benefit, and ask for a specific decision.

The business-client version focuses on operational handoff risk in banking/leasing or general trading-company operations. If you adapt this model, sanitized shipment, order, procurement, supplier-status, and workflow examples are acceptable. Do not use investment advice, securities-market prediction, stock ticker symbols, real firm names, real identifying customer/account/order/shipment/transaction data, or legal or regulatory advice.

The government-agency version focuses on administrative intake quality and service consistency. If you adapt this model, do not use politics, public-policy advocacy, legislation, budget campaigning, or official symbols such as flags, seals, emblems, and crests.

Both models use simple fictional evidence because a process-improvement briefing needs enough support to justify a pilot. Do not add heavy chart teaching here unless a unit specifically asks learners to compare this model with a data-focused project results briefing.

Product, Service, or Program Launch Models

These two models show how to launch a new service, support process, or program in a clear workplace briefing. The main skills are a value-focused opening, audience benefit, simple visual hierarchy, rollout timing, adoption questions, and clear next steps.

Both organizations, names, situations, and figures are fictional for practice. Do not copy the names, figures, or situations into a real workplace presentation.

Appendix Timing Note

Each model is designed for about 7 to 8 minutes of spoken delivery plus 5 minutes of Q&A at a clear, practiced pace. If you need a shorter presentation, remove one example from the benefit section or one detail from the rollout section.

How to Use These Models

Read the full spoken model first. Then use the notes, vocabulary, visuals, and Q&A examples to understand how the presentation is built.

When you prepare your own presentation, do not copy the script word for word. Use it as a model for structure, useful phrases, clear visuals, and handling questions.

Model 1: Business Client - Launching a Supplier-Status Dashboard

Scenario Brief

Koyo Trading Client Services is preparing a pilot launch of an internal supplier-status dashboard for two fictional client-service teams: Team North and Team West. The dashboard will give client-service account managers one weekly view of supplier inquiry status, shipment reporting deadlines, and unresolved reporting requests for imported machinery parts. In this model, account manager means the person who manages client-service communication, not a securities or investment account manager.

This is a banking/leasing or general trading-company account-service operations example. It is not a securities-trading tool. It does not give investment advice, securities-market predictions, or legal or regulatory advice.

Audience and Purpose

Audience:

- client-service account managers
- account-service staff
- reporting operations
- team leadership

Purpose: secure agreement for a four-week pilot launch with two account teams.

Audience action: nominate pilot users, confirm the launch date, and agree how feedback will be collected.

Expected Delivery Time

Spoken script: about 7 to 8 minutes.

Q&A: 5 minutes.

Suggested Visual Sequence

1. Title and decision needed: Supplier Status Dashboard Pilot
2. Why now: three simple figures from the last reporting cycle
3. What changes: dashboard mockup with sanitized labels
4. How it helps: three benefit boxes, Earlier view, Fewer repeated messages, Clearer ownership
5. Rollout: four-week timeline
6. Next steps: pilot users, launch date, feedback owner

Visual notes:

- Use fictional client-team names only, such as Account Team A.
- Keep the dashboard mockup simple: top status bar, request status, deadline panel, and owner column.
- Use a clear title for each visual. Do not show real company names, customer names, account, shipment, or order numbers, ticket IDs, shipment IDs, stock ticker symbols, or proprietary system screens.

Sample Slide Set

Sample slide deck: [Launch Business-Client Deck](#)

Key Vocabulary Before Listening

Term	Simple meaning
pilot	a small test before wider use
pre-read	short material sent before a meeting or presentation
dashboard	one screen or visual page that shows key status information
client-service account manager	a person who manages client-service communication and follow-up, not securities trading
rollout	the planned introduction of a new process, service, or tool
status-check message	a message asking what has happened or what is still open
ownership	who is responsible for the next action
sanitized	changed to remove sensitive or identifying information
follow-up handout	material sent or given after a presentation

Full Spoken Model Script

Good morning, everyone. This briefing is about a small launch with a practical goal: fewer repeated status checks before shipment reporting deadlines.

I will introduce the pilot version of our supplier-status dashboard and ask you to confirm three launch decisions: the two pilot teams, the launch date, and how we will collect feedback during the first four weeks.

The reason for the launch is simple: the dashboard will help client-service account managers see reporting issues earlier, reduce repeated status-check messages, and give each team a clearer view of ownership before shipment deadlines.

The opportunity is clearest if we look at the last reporting cycle.

In the last reporting cycle, we had 74 status-check messages between account service, sales coordination, and reporting operations. Almost half of those messages asked for information that another team already had. For example, three people asked whether the same supplier inquiry for imported pump parts had been answered before the Friday shipment-reporting deadline. We also estimate that repeated status checks took about 9 staff-hours each week.

These figures show a common problem. The problem is not that people are careless. The problem is that the current information is spread across several places. One team may know that a request is waiting. Another team may

know that the deadline is close. A third person may know who owns the next action. But the full picture is not easy to see.

That is why we are proposing a small pilot dashboard.

Here is what will change during the pilot.

The dashboard is an internal weekly view. It will not replace official reports. It will not replace the account-service process. It will not be sent to clients during this pilot.

Please look at the dashboard mockup on the screen. At the top, you can see the reporting cycle and the current week. On the left, there is a short list of account teams in the pilot. In the middle, there are request status fields: open, waiting, and complete. On the right, there is the next reporting deadline and the current owner for the next action.

The key information is at the top because the user needs to answer one question quickly: “What needs attention before the next deadline?” The supporting details appear below it. The owner field is separate because it tells people who should act next.

The value depends on the user group.

For client-service account managers, the first benefit is earlier visibility. Instead of asking several people for status near the deadline, they can check one shared weekly view and see which requests need attention.

For account-service staff, the second benefit is fewer repeated messages. If the status is visible in one place, the same question does not need to move through three different email threads. For example, if Team North can see that a supplier reply is due by Thursday noon, they do not need to ask reporting operations again on Friday morning.

For reporting operations, the third benefit is clearer ownership. The dashboard does not solve every reporting issue, but it shows who owns the next action. That makes the handoff easier to manage.

There is also one important limit. This dashboard is not a record of shipment instructions, shipment or order details, or account information. For the pilot, all examples must be sanitized, and all fields must follow our internal data rules. If a field is sensitive or not approved for this view, it will not be included.

The rollout is designed to support adoption, not force a wide launch.

The pilot will run for four weeks. In Week 0, before launch, we confirm the pilot users and access for Team North and Team West. We also send a one-page user guide. In Week 1, the dashboard goes live for the two teams, and we collect the first issues in a simple issue log. In Week 2, we review repeated questions and adjust the labels if users are confused. In Week 3, we check the owner and deadline fields carefully, because these fields are the main value of the dashboard. In Week 4, we review the pilot and decide whether to continue, revise, or stop.

During the pilot, we will check three things. First, are repeated status-check messages reduced? Second, do users understand the fields? Third, does the update process create too much work for reporting operations?

The pilot target is a 30 percent reduction in repeated status-check messages. That target is not a promise. It is a practical test point. If the number does not improve, or if the dashboard creates more confusion, we will revise the approach before any wider launch.

Support is part of the launch, not an afterthought.

Reporting operations will update the status fields once a week. Each pilot team will have one client-service account manager as the main user contact. Account-service will collect feedback using a short form. If there is a data question or a confidentiality concern, we will pause that field and check it before continuing.

For materials, I have prepared four items. The pre-read is a one-page summary of the dashboard purpose and pilot schedule. Today's live visual is the dashboard mockup and rollout timeline. The follow-up handout is the pilot user guide, with support contact and feedback form. The backup material is the data-field list and confidentiality rules, which we will use only if needed during Q&A.

In short, this is not a new reporting process. It is a shared weekly view that helps people see issues earlier, reduce repeated messages, and clarify ownership before shipment deadlines.

The next step is to confirm the two pilot teams today. After that, I will send the final user list, access plan, and feedback form by Friday. If we agree today, the pilot can start next Monday.

Thank you. I am happy to take your questions.

Language Notes

Useful launch phrases:

- This briefing is about...
- I will introduce... and ask you to confirm...
- The opportunity is clearest if we look at...
- The rollout is designed to...
- This will not replace...
- The first benefit is...
- There is also one important limit.
- The next step is to confirm...

First-use vocabulary:

Term	Simple meaning
pilot	a small test before wider use
pre-read	short material sent before a meeting or presentation
dashboard	one screen or visual page that shows key status information
rollout	the planned introduction of a new process, service, or tool
status-check message	a message asking what has happened or what is still open
ownership	who is responsible for the next action
sanitized	changed to remove sensitive or identifying information
follow-up handout	material sent or given after a presentation

Register note: I would like us to agree on... is polite and direct. It is stronger than only saying I will explain... because it tells the audience what decision is needed.

Pronunciation and Intelligibility Notes

Thought groups for the opening:

Today / I would like to introduce / the pilot version / of our supplier-status dashboard.

Stress these key words:

- pilot
- dashboard
- earlier
- deadline
- owner
- next action

Katakana risk:

- client has one syllable in natural English: /klai-uhnt/. Avoid adding an extra vowel after the final t.
- dashboard has stress on the first syllable: DASH-board.
- reporting has stress on the second syllable: re-PORT-ing.

Pause after limits language:

It will not replace official reports. [pause] It will not replace the account-service process. [pause] It will not be sent to clients during this pilot.

Q&A Model Answers

Function	Question	Model answer
Answer directly	Will this replace the existing reports?	No. It will not replace the official reports. It is a weekly status view that helps teams see open items earlier.
Clarify the question	Do you mean whether clients will see this dashboard, or whether only internal teams will use it?	For this pilot, only internal teams will use it. If we later consider a client-facing view, that will need a separate approval process.
Bridge to rationale	Why do we need a dashboard instead of more email updates?	The issue is not only the number of updates. The issue is that ownership and status are hard to see across teams. The dashboard gives one shared view before the deadline.
Acknowledge limitation	What if different teams use different reporting cycles?	That is a real limitation. For the pilot, we will include only two teams with similar reporting cycles. Then we will check what changes are needed before wider use.
Defer safely	Can real customer names appear in the dashboard later?	I cannot confirm that today. For the pilot, we will use sanitized labels only. I will check data and confidentiality requirements before any wider launch.
Confirm follow-up	Who updates the dashboard after launch?	Reporting operations will update the status fields each week. Team North and Team West will each have one client-service account manager as the user contact. I will send the owner list after this meeting and include it in the pilot guide.

Privacy, Security, Accessibility, and Contingency Notes

Privacy and security:

- Use fictional or sanitized labels only.
- Do not show customer names, account, shipment, or order numbers, ticket IDs, shipment IDs, shipment or order details, proprietary screens, or confidential notes.
- Confirm approved access before the pilot starts.
- Check file metadata before sharing the user guide or mockup.

Accessibility:

- Use readable labels and strong contrast in the dashboard mockup.
- Do not rely on red, yellow, and green alone. Add text labels such as Open, Waiting, and Complete.
- Add alt text if the mockup is shared as a file.

Contingency:

- Prepare a PDF fallback of the mockup and timeline.
- Keep an offline copy.
- If the dashboard screen cannot be shown, present from the PDF and send the link after the meeting.

Skills You Can Practise

Unit connection	Skill shown in this model
Unit 2	Value-focused opening, audience relevance, action request
Unit 4	Launch-plan signposting, contrast language, next-step language
Unit 5	Dashboard visual hierarchy, readable labels, what-to-notice explanation
Unit 7	Pre-read, live visual, follow-up handout, backup material, confidentiality check
Unit 10	Adoption-limit Q&A, direct answers, clarification, safe deferral, follow-up
Unit 12	Final workplace presentation model with clear action and required Q&A

Model 2: Government Agency - Launching an Application Support Desk

Scenario Brief

Aoba City Administrative Support Center is preparing a three-month pilot of an application support desk for the resident certificate support form. The desk will be open on Tuesday and Thursday mornings during the pilot. It will help

residents complete online forms before submission, especially when they have questions about attachments or required fields. Counter staff and call-center staff will use the same guidance sheet so residents receive consistent answers.

This is an administrative service-delivery example. It is not a political proposal, policy campaign, legislation briefing, or budget advocacy presentation.

Audience and Purpose

Audience:

- administrative managers
- counter-service staff
- call-center staff
- service-planning team

Purpose: gain approval for a three-month pilot of the support desk.

Audience action: approve the pilot schedule, confirm staffing, and agree what service data will be reviewed after three months.

Expected Delivery Time

Spoken script: about 7 to 8 minutes.

Q&A: 5 minutes.

Suggested Visual Sequence

1. Title and decision needed: Application Support Desk Pilot
2. Why now: common inquiry types and repeat inquiry issue
3. What changes: simple service-flow diagram
4. How it helps: fewer incomplete submissions, fewer repeat visits, clearer guidance
5. Rollout: three-month pilot timeline
6. Next steps: schedule approval, staffing, review measures

Visual notes:

- Use plain administrative visuals: service-flow diagram, timeline, and guidance-sheet sample.
- Avoid flags, seals, emblems, crests, national symbols, party colors, or country-specific iconography.
- Keep the service-flow diagram readable without color alone. Use labels and arrows.

Sample Slide Set

Sample slide deck: [Launch Government-Agency Deck](#)

Key Vocabulary Before Listening

Term	Simple meaning
support desk	a service point where users can ask for help
resident certificate	a document that confirms basic resident-registration information
submission	sending or giving in a form
pre-read	short material sent before a meeting or presentation
rollout	the planned introduction of a new process, service, or tool
repeat inquiry	a second or later question about the same issue
guidance sheet	a short document that explains what to do
counter capacity	the amount of staff time available at the service counter
screen reader	software that reads digital text aloud for accessibility

Full Spoken Model Script

Good afternoon, everyone. I want to focus on one service need today: helping residents complete online forms before problems become repeat inquiries.

The decision I need is whether we can approve the pilot schedule, confirm the staffing plan, and agree what we will measure after three months.

My recommendation is to test a small application support desk because it gives residents practical help before they submit a form.

The user need is already visible in our inquiry pattern.

More residents are starting online forms, but many still need help before they can submit the forms correctly. Last month, there were 312 inquiries about the resident certificate support form. About 47 percent were about attachments or field entry. About 28 percent led to a repeat visit or a follow-up call.

These figures show a realistic service problem. When a form is incomplete, staff must answer another inquiry. The resident may need to call again, visit again, or wait longer for the next step. This creates extra work for staff and a frustrating experience for users.

The support desk is designed to help before submission.

The service design adds one support point before submission.

Please look at the service-flow diagram. In the current process, the user opens the online form, completes it alone, submits it, and then staff review it. If an attachment is missing or a field is incomplete, staff must contact the user again or return the form.

In the pilot process, there is one extra support point before submission. The user can ask the support desk about required attachments, unclear fields, or common entry problems. The user still submits the form. Staff still review the form. The application rules do not change.

This point is important. The support desk does not complete the form for the resident. It does not make a decision on the application. It does not change the requirements. It gives practical guidance so the resident can submit a more complete form.

That design creates three practical benefits.

The first benefit is fewer preventable errors. Many incomplete forms are not difficult cases. They are common problems such as a missing attachment, an incomplete contact field, or uncertainty about which document is needed.

The second benefit is fewer repeat contacts. If users can ask a question before submission, some repeat visits and follow-up calls can be avoided. This helps users, and it also protects staff time.

The third benefit is clearer guidance. During the pilot, we will record common questions each week. That record will show us where the form guidance is unclear. It may help us improve the guidance sheet later.

The staffing plan keeps the pilot limited.

The pilot will run for three months. Before launch, we will train assigned staff and prepare a short guidance sheet for the resident certificate support form. In Month 1, the support desk will open on Tuesday and Thursday mornings. Staff will record inquiry categories, but they will not record unnecessary personal details in the pilot log. In Month 2, we will review common questions with the call-center team and adjust the guidance sheet if needed. In Month 3, we will review repeat inquiries, staff workload, and user comments.

The pilot target is a 15 percent reduction in repeat inquiries for the selected online form process. This is a target for review, not a promise. If the desk reduces repeat inquiries but creates too much pressure at the counter, we need to know that. If the desk helps only a small group of users, we need to know that too.

On staffing, I recommend limited hours first.

The desk will start with limited hours, not full-day coverage. This protects counter capacity while we test the service. Assigned staff will use the same guidance sheet, so users receive consistent information. The call-center team will also receive the guidance sheet, because some residents may ask the same questions by phone.

We will review four measures after three months: repeat inquiries, common question categories, staff workload, and user comments. These measures will help us decide whether to continue, revise, or stop the service.

For materials, I have prepared four items. The pre-read is a one-page pilot proposal for managers. Today's live visual is the service-flow diagram and pilot timeline. The follow-up handout is the staff guidance sheet and inquiry-log categories. The backup material is the draft staffing schedule and plain-language notes.

Accessibility also matters here. The support desk is part of public-facing communication, so the guidance must be plain, readable, and usable for residents with different levels of confidence using online forms. The guidance sheet should use short sentences, clear headings, and large enough text. If we share the material digitally, it should also be readable by screen readers where possible.

So the service case is this: the desk helps users before submission, keeps the application rules unchanged, and gives us better information about where users need support.

The next step is to approve the pilot schedule and staffing plan today. If we agree, the team can prepare the guidance sheet next week and start the three-month pilot at the beginning of next month.

Thank you. I welcome your questions.

Language Notes

Useful launch phrases:

- I want to focus on one service need today...
- The decision I need is whether...
- My recommendation is to test... because...
- The service design adds...
- The support desk is designed to...
- This point is important.
- The pilot target is...

- This is a target for review, not a promise.

First-use vocabulary:

Term	Simple meaning
support desk	a service point where users can ask for help
submission	sending or giving in a form
pre-read	short material sent before a meeting or presentation
rollout	the planned introduction of a new process, service, or tool
repeat inquiry	a second or later question about the same issue
guidance sheet	a short document that explains what to do
counter capacity	the amount of staff time available at the service counter
screen reader	software that reads digital text aloud for accessibility

Register note: This is a target for review, not a promise is useful when presenting pilot goals. It sounds honest and professional.

Pronunciation and Intelligibility Notes

Thought groups for the core message:

A small application support desk / will reduce incomplete submissions / and make the online form process easier / for residents.

Stress these key words:

- support desk
- before submission
- incomplete
- repeat inquiries
- guidance
- three months

Katakana risk:

- support has stress on the second syllable: sup-PORT.
- application has stress on the third syllable: ap-pli-CA-tion.
- resident has stress on the first syllable: RE-si-dent.

Use pauses to separate limits:

The support desk does not complete the form for the resident. [pause] It does not make a decision on the application. [pause] It does not change the requirements.

Q&A Model Answers

Function	Question	Model answer
Answer directly	Will this reduce counter capacity?	It may use some staff time, so the pilot starts with limited hours. We will check staff workload each week before making any wider recommendation.
Clarify the question	Are you asking whether staff will help users understand the form, or whether staff will complete the form for them?	Staff will explain the form and check common problem points. They will not complete the form for the resident.
Bridge to rationale	Why not improve the form first instead of adding a desk?	Form improvement is still important, but it will take longer. The support desk gives immediate help and also shows which parts of the form create the most questions.
Acknowledge limitation	What about residents who do not use online forms?	That is an important limit. Counter and phone support will continue. The pilot is only for the selected online form process, and we will check whether it affects other service channels.
Defer safely	Can we use the same desk for other application types?	Possibly, but I do not want to assume that today. After the three-month review, we can decide which application types are suitable for expansion.
Confirm follow-up	What will we measure after the pilot?	We will review repeat inquiries, common question categories, staff workload, and user comments. I will include these measures in the pilot review note.

Privacy, Security, Accessibility, and Contingency Notes

Privacy and security:

- Do not record unnecessary personal information in the pilot inquiry log.
- Use inquiry categories, not detailed personal cases, for the review.
- Store pilot files in an approved internal location.
- Check document metadata before sharing the guidance sheet.

Accessibility:

- Use plain-language headings and short steps in the staff guidance sheet.

- Make the service-flow diagram understandable without color alone.
- Use readable font size and sufficient contrast.
- Prepare alt text if the diagram is shared digitally.
- Consider caption or transcript support if the briefing is recorded.

Contingency:

- Prepare a PDF fallback of the service-flow diagram and timeline.
- Bring a printed one-page timeline for the meeting room.
- If the projector or screen share fails, describe the process in five steps and send the visual after the meeting.

Skills You Can Practise

Unit connection	Skill shown in this model
Unit 2	Value-focused opening, audience relevance, clear action request
Unit 4	Signposting, limits language, sequence language, next-step language
Unit 5	Service-flow visual hierarchy, readable process labels, accessibility
Unit 7	Pre-read, live visual, follow-up handout, backup material, plain-language check
Unit 10	Adoption-limit Q&A, direct answers, clarification, safe deferral, follow-up
Unit 12	Final workplace presentation model with clear action and required Q&A

Comparing the Two Launch Models

Skill	Business-client model	Government-agency model
Value-focused opening	Reduces repeated status checks before shipment reporting deadlines	Reduces incomplete submissions and repeat inquiries
Audience relevance	Account managers need earlier visibility and clearer ownership	Staff and managers need a practical support process
Visual hierarchy	Dashboard mockup puts status, deadlines, and owners first	Service-flow diagram makes the support point visible
Rollout timeline	Four-week two-team pilot	Three-month limited-hours pilot
Document roles	User guide, field list, feedback form	Staff guidance sheet, inquiry categories, staffing schedule

Skill	Business-client model	Government-agency model
Adoption-limit Q&A	Dashboard scope, data confidentiality, update ownership	Service scope, staff workload, user access
Next-step language	Nominate users and confirm launch date	Approve schedule and staffing plan

AI Critical-Literacy Note

If your class discusses AI, use it only for checking and critique. For example, you can review a short flawed AI-style launch opening and identify generic claims, missing limits, confidentiality risk, or unclear audience benefit. Do not use AI to generate your final script or final visuals. Your presentation, language, visuals, Q&A preparation, and final delivery must remain your own work.

Project Results Briefing Models

These models show how a presenter can report project results, explain simple evidence, and recommend next steps. The data is fictional for practice. Do not replace it with real client, account, transaction, applicant, staff, or internal control information.

Use these models when you need to practise:

- results-evidence-next steps structure
- cautious claims
- chart and data explanation
- online or recorded delivery adaptation
- evidence-based Q&A
- a final recommendation or action request

How to Use These Models

Read the full spoken model first. Then use the notes, vocabulary, visuals, and Q&A examples to understand how the presentation is built.

When you prepare your own presentation, do not copy the script word for word. Use it as a model for structure, useful phrases, clear visuals, and handling questions.

Model 1: Business Client - Reporting Results from the Exception Resolution Pilot

Scenario and Purpose

Seika Global Trading Operations tested a new exception resolution process for import document handoffs at the Yokohama Import Documentation Desk. The old process used separate email threads and manual handoff messages, so some exceptions, such as missing supplier packing-list confirmations, were not owned clearly before the 3:00 p.m. preparation cutoff.

The pilot used a shared exception log and a fixed daily checkpoint. After four weeks, the presenter reports the results and recommends expanding the process to two more fictional desks: Kansai Machinery Imports and Nagoya Parts Coordination.

All organization names and data in this model are fictional for practice.

Audience:

- operations leadership
- risk/control representative
- documentation team lead
- account-service manager

Purpose: report pilot results and request approval for controlled expansion.

Core message: The pilot reduced late document handoffs and made ownership clearer, so the process should expand to the Kansai Machinery Imports and Nagoya Parts Coordination desks with two small controls: a morning log check and one owner for duplicate entries.

Expected delivery time: about 5.5 to 6.5 minutes, plus 5 minutes for Q&A.

Suggested Visual Sequence

Visual	Main message	Presenter action
1. Title and decision needed	We need a decision on controlled expansion.	State the purpose and preview the structure.
2. Pilot Objective	The pilot targeted unclear handoffs.	Remind listeners why the pilot was started.
3. Before/after chart	Late document handoffs and rework time both fell.	Explain the chart in 60 to 90 seconds.
4. What changed table	The shared log improved ownership, but two issues remain.	Connect results to operational learning.
5. Recommendation summary	Expand to two desks with two controls.	Ask for approval and define the next review point.
Backup. Volume-adjusted table	The improvement was still visible after checking volume.	Use only if asked about volume effects.

Suggested chart title: **Pilot reduced late document handoffs and rework time.**

Sample Slide Set

Sample slide deck: [Results Business-Client Deck](#)

Key Vocabulary Before Listening

Term	Simple meaning
------	----------------

Term	Simple meaning
exception	a case that needs checking because it does not follow the normal process
handoff	the point where one person or team passes work to another
rework time	extra time spent fixing or checking the same item again
controlled expansion	a wider trial with clear limits and safeguards
rollout	introducing a process to all target teams
volume-adjusted view	a check that compares results after considering workload size
duplicate entry	the same item entered more than once

Full Spoken Model Presentation

Opening and Preview

Good morning. The short answer from the exception resolution pilot is positive, but it is not yet a full-rollout case.

The pilot had one main goal: to reduce late import document handoffs caused by unclear handoffs.

I will focus on the decision evidence: what improved, what remains uncertain, and why I recommend a controlled expansion to the Kansai Machinery Imports and Nagoya Parts Coordination desks.

The approval request is a six-week expansion with two small controls before we scale the process further.

Pilot Objective

The objective was narrow.

Before the pilot, exception checks were handled through separate email threads, spreadsheet notes, and manual handoff messages. This made ownership unclear, especially before the 3:00 p.m. preparation cutoff.

The project team did not change the approval process. We also did not change the control steps. The change was narrower than that. We introduced a shared exception log and a fixed daily checkpoint so that each open exception had a visible owner.

The target was simple: fewer late document handoffs, less rework time, and clearer ownership.

Main Results

The evidence is shown in the before/after chart.

The first result is late document handoffs. Before the pilot, we had 38 late document handoffs in the measured month. After the pilot, this fell to 27. That is a reduction of about 29%.

The second result is rework time. Before the pilot, average rework time was 22 minutes per exception. After the pilot, it fell to 16 minutes. That is six minutes less per exception.

These results are positive, but I want to be careful about the claim. The chart does not prove that the shared log caused every improvement. Volume, staffing, and the type of exceptions can also affect the result. We checked a simple volume-adjusted view as backup: late handoffs fell from 5.2 to 3.9 per 100 open exceptions. The improvement is smaller in that view, but it is still visible. The user feedback also supports the same story.

In the user check, 82% of pilot users said ownership was clearer. That is important because ownership was the main problem we were trying to solve.

What We Learned

The evidence is useful, but the limitations matter.

The shared log helped teams see who owned each exception. It also reduced repeated messages because the current status was easier to find.

At the same time, the pilot showed two issues that we should fix before expansion.

The first issue is morning updates. Some entries were not refreshed early enough, so the first checkpoint sometimes started with old information. This did not break the process, but it reduced trust in the log.

The second issue is duplicate entries. We found 9 duplicate log entries during the pilot. This happened when two people entered the same exception from different message threads. For example, one supplier packing-list delay appeared once under the supplier name and once under the document type.

These issues are manageable. They do not mean we should stop the process. But they do mean we should expand with controls, not move directly to full rollout.

Recommendation

Based on the evidence, I recommend expanding the process to the Kansai Machinery Imports and Nagoya Parts Coordination desks for six weeks.

My recommendation has two conditions.

First, each desk should complete a morning log check by a named person. This will make sure the log is current before the daily work becomes busy.

Second, one person should own duplicate-entry checks. This does not need to be a new full-time role. It can be a clear daily responsibility inside the team.

This approach gives us a wider test, but it still limits the risk. It also gives the risk/control team a clear point to review before any larger rollout.

Action Close

The result changes the decision in two ways. It is strong enough to continue, but not strong enough for full rollout.

The result is positive, but not perfect. For that reason, I am not asking for full rollout today.

I am asking for approval to expand the process to the Kansai Machinery Imports and Nagoya Parts Coordination desks for six weeks, with a morning log check and duplicate-entry ownership. After six weeks, I will report the result again with the same measures and a volume-adjusted view.

Thank you. I am ready to take your questions.

Language Notes

Useful phrases:

- “The pilot had one main goal: to...”
- “The result is positive, but not perfect.”
- “This suggests that..., but it does not prove that...”
- “Based on the evidence, I recommend...”
- “I am not asking for full rollout today. I am asking for...”

Vocabulary:

Term	Simple meaning in this model
exception	A case that needs checking because it does not follow the normal process.
handoff	The point where one person or team passes work to another.
rework time	Extra time spent fixing or checking the same item again.
controlled expansion	A wider trial with clear limits and safeguards.
rollout	Introducing a process to all target teams.

Cautious claim language:

- Stronger: “The pilot reduced every delay.” Avoid this. It overclaims.
- Better: “The pilot appears to have reduced delays.”
- Better: “The improvement was visible in both measures.”
- Better: “This is strong enough to justify a controlled expansion.”

Pronunciation and Intelligibility Notes

- Chunk the opening: “Today I will report the results / of the exception resolution pilot / and recommend the next step.”
- Stress key numbers: “from **38** to **27**” and “from **22** minutes to **16** minutes.”
- Watch katakana risk in these words: exception, confirmation, process, control, volume, duplicate.
- Do not rush the chart explanation. Say one result, pause, then say the second result.
- Keep final recommendation direct and polite: “I recommend expanding...” is clearer than “Maybe it might be good to consider...”

Q&A Model Answers

Function	Question	Model answer
Clarify the question	Are you saying the pilot solved the delay problem?	If I understand correctly, you are asking whether the problem is fully solved. No, not fully. The result improved, but we still need to fix morning updates and duplicate log entries.
Answer directly	Is the improvement large enough to expand?	Yes, I think it is large enough for a controlled expansion. Late document handoffs fell by about 29%, and rework time also fell. I am not recommending full rollout yet.
Bridge to evidence	Could this be because volume was lower during the pilot?	That is possible, so we checked the result against average daily volume. The improvement was still visible, although the exact percentage was smaller. That is why I recommend expansion, not full rollout.
Acknowledge risk or limitation	Does the shared log create a control risk?	It could create a risk if ownership is unclear. To reduce that risk, each exception needs one named owner, and duplicate entries must be checked each morning.
Defer safely	Can you confirm whether this meets	I cannot confirm the full control position today. I can say that the pilot did not change

Function	Question	Model answer
	all control requirements?	the approval process. I will confirm the control review result with the risk/control team before expansion.
Confirm follow-up or next action	What do you need from us today?	Today I need approval to expand the pilot to the Kansai Machinery Imports and Nagoya Parts Coordination desks for six weeks, with the two controls shown on the final slide. I will report the next result after the six-week review.

Privacy, Security, Accessibility, and Contingency Notes

- Privacy/security: do not show real desk names, customer names, account, shipment, or order numbers, shipment IDs, ticket numbers, internal control findings, or confidential message text.
- Scope guardrail: do not include investment advice, securities-market predictions, stock ticker symbols, real firm names, securities exchange names, or legal or regulatory advice.
- Accessibility: use readable chart labels, do not rely on color alone, and add a short note that the data is fictional for practice.
- Online contingency: keep a PDF version and a one-page summary ready. If screen sharing fails, state the two main numbers aloud and send the summary after the meeting.
- Q&A contingency: keep the volume-adjusted table as backup, but do not show it unless the audience asks about volume effects.

Skills You Can Practise

Unit connection	Skill shown in this model
Unit 3	Results briefing structure: objective, results, learning, recommendation, action
Unit 4	Preview, transitions, balanced summary, and action close
Unit 6	Before/after chart explanation and careful evidence language
Unit 9	Online or recorded adaptation for a chart-based briefing
Unit 10	Evidence-based Q&A, safe deferral, limitation language, and follow-up
Unit 12	Final workplace model with evidence, recommendation, timing, and Q&A

Model 2: Government Agency - Reporting Results from the Intake Checklist Trial

Scenario and Purpose

Midori Ward Administrative Services Office tested a new intake checklist for housing support certificate applications. Before the trial, many forms were returned because attachments were missing or key fields were incomplete. Returned applications created delays, repeat inquiries, and extra staff work.

The trial used a short front-counter checklist and a shared FAQ sheet. After one month, the presenter reports the results and recommends expanding the checklist to two more high-volume application types: childcare fee reduction applications and elderly transport pass applications.

All organization names and data in this model are fictional for practice.

Audience:

- department leadership
- section manager
- counter-service staff
- document-review staff

Purpose: report trial results and request approval to expand the checklist.

Core message: The intake checklist reduced preventable returned applications, so it should expand to childcare fee reduction applications and elderly transport pass applications with one owner for checklist updates.

Expected delivery time: about 5.5 to 6.5 minutes, plus 5 minutes for Q&A.

Suggested Visual Sequence

Visual	Main message	Presenter action
1. Title and decision needed	We need a decision on limited expansion.	State the purpose and audience decision.
2. Trial Objective	The checklist targeted preventable intake errors.	Explain the problem without blaming staff or applicants.
3. Process Note	The checklist is used before formal review.	Show where the checklist fits in the intake process.
4. Before/after chart	Returned applications and repeat inquiries both fell.	Explain the chart in 60 to 90 seconds.

Visual	Main message	Presenter action
5. Recommendation summary	Expand to two application types and assign update ownership.	Ask for approval and confirm next actions.
Backup. Staff feedback summary	The checklist added about 40 seconds per intake.	Use only if asked about waiting time or staff workload.

Suggested chart title: **Checklist trial reduced returns and repeat inquiries.**

Sample Slide Set

Sample slide deck: [Results Government-Agency Deck](#)

Key Vocabulary Before Listening

Term	Simple meaning
intake	the first step when an office receives an application
formal review	the detailed check after the application is accepted
repeat inquiry	a second or later question about the same case
high-volume application type	an application type that the office receives often
update owner	the person or role responsible for keeping a document current
waiting time	how long users wait before receiving service
rotating staff	staff who move between different duties or counters

Full Spoken Model Presentation

Opening and Preview

Good afternoon. The intake checklist trial gives us a clear before-and-after service result.

The trial focused on one practical administrative problem: too many applications were returned because preventable errors were found after formal review. This caused delays for applicants, repeat inquiries for staff, and extra work for the document-review team.

I will use a service-review structure: what changed, what improved, what still needs attention, and which application types should come next.

The decision today is whether to expand the checklist and assign one update owner.

Trial Objective

First, here is what changed.

Before the trial, staff checked applications at intake, but the check was not always the same. Some missing attachments and incomplete fields were found only after formal review. When that happened, the application had to be returned, and the applicant often contacted the office again.

The trial introduced a short front-counter checklist and a shared FAQ sheet. The purpose was not to make the counter process complicated. The purpose was to catch common errors earlier, before formal review started.

The target was to reduce returned applications and repeat inquiries while keeping the counter process practical for staff.

Process Note

The process note shows where the checklist fits.

The checklist is used at the intake step, before the application moves to formal document review. Staff check the most common preventable issues: required attachment, contact field, ID field, and signature field.

If something is missing, staff can explain the point immediately using the FAQ sheet. If the application is complete, it moves to formal review as before.

This is a small process change, but it changes the timing of the check. We are trying to find simple problems earlier, not add another full review stage.

Main Results

The improvement is visible in the result chart.

The first result is returned applications. Before the trial, 142 applications were returned in the measured month. After the trial, this fell to 111. That is a reduction of about 22%.

The second result is repeat inquiries. Before the trial, there were 86 repeat inquiries. After the trial, this fell to 68. That is a reduction of about 21%.

The third result is more specific. Attachment-related returns fell from 77 to 58, a reduction of about 24%. This matters because missing attachments were one of the exact problems the checklist was designed to catch.

The result is useful, but we should be careful. The trial was only one month. Also, staff reported that the checklist added about 40 seconds to each intake.

That is not a large amount of time for one case, but it may affect waiting time when the counter is busy.

What We Learned

The trial suggests three points.

First, the checklist works best when it is short. Staff said they could use it when the points were limited to common errors. A long checklist would probably slow down the counter too much.

Second, the FAQ sheet helped staff give the same explanation to applicants. This reduced repeated questions and made the guidance more consistent.

Third, update ownership is important. If application requirements change, the checklist must change quickly. If no one owns updates, staff may use an old version.

For these reasons, the next step should be limited expansion, not office-wide rollout.

Recommendation

Based on the trial, I recommend expanding the checklist to two more high-volume application types: childcare fee reduction applications and elderly transport pass applications.

I also recommend assigning one update owner in the document-review team. Counter-service staff should be able to send change requests, but one person or role should approve and update the checklist. Rotating staff should receive a 15-minute reminder before they first use the revised checklist.

During the expansion, we should measure three things: returned applications, repeat inquiries, and waiting time at the counter. This will show both the benefit and the service impact.

Action Close

The service result is encouraging: returned applications fell, repeat inquiries fell, and attachment-related returns also fell.

At the same time, we should monitor counter time and keep the checklist short.

My recommendation is limited expansion: childcare fee reduction applications, elderly transport pass applications, one update owner, and another review after one month.

Thank you. I am ready to take your questions.

Language Notes

Useful phrases:

- “The trial focused on one practical problem...”
- “The purpose was not to... The purpose was to...”
- “This is a small process change, but...”
- “The result is useful, but we should be careful.”
- “The decision today is whether to...”
- “The service result is encouraging...”
- “My recommendation is limited expansion...”

Vocabulary:

Term	Simple meaning in this model
intake	The first step when the office receives an application.
formal review	The detailed check after the application is accepted.
repeat inquiry	A second or later question about the same case.
high-volume application type	An application type that the office receives often.
update owner	The person or role responsible for keeping a document current.

Cautious claim language:

- Stronger: “The checklist solved returned applications.” Avoid this. It overclaims.
- Better: “The checklist appears to have reduced preventable errors.”
- Better: “The link is strong enough to justify a limited expansion.”
- Better: “We should monitor waiting time during the expansion.”

Pronunciation and Intelligibility Notes

- Chunk the opening: “I will report the results / of the intake checklist trial / and recommend the next step.”
- Stress contrast: “The purpose was **not** to add a full review stage. The purpose was to catch common errors **earlier**.”
- Watch katakana risk in these words: application, attachment, checklist, inquiry, review, administrative.
- Pause before limitations: “The result is useful, / but we should be careful.”
- Say percentages clearly: “twenty-two percent,” not only “two two percent.”

Q&A Model Answers

Function	Question	Model answer
Clarify the question	Do you mean the checklist should be used for every application type?	Not yet. My recommendation is limited expansion to childcare fee reduction applications and elderly transport pass applications. After that, we should review the result again.
Answer directly	Did the checklist reduce returned applications?	Yes. In the trial, returned applications fell from 142 to 111. That is a reduction of about 22%.
Bridge to evidence	Why do you think the checklist caused the improvement?	The main improvement was in attachment-related returns, which the checklist directly targeted. That does not prove every change came from the checklist, but the link is strong enough to justify the next trial.
Acknowledge risk or limitation	Will this make the counter line longer?	It may add some time. Staff reported about 40 seconds per intake. That is why we should monitor waiting time during the expansion, not only returned applications.
Defer safely	Can you confirm the exact training time needed for rotating staff?	I cannot confirm the exact training time today. My estimate is a short reminder session, but I will check with the counter-service supervisor and include a training plan before the expansion starts.
Confirm follow-up or next action	Who should update the checklist when requirements change?	I recommend assigning one update owner in the document-review team, with counter-service staff sending change requests. If you approve the expansion, I will draft that ownership rule this week.

Privacy, Security, Accessibility, and Contingency Notes

- Privacy/security: do not show applicant names, ID numbers, addresses, phone numbers, staff records, case numbers, or real form images.
- Scope guardrail: keep the example administrative. Do not add policy advocacy, budget campaigning, legislation, flags, seals, emblems, crests, or country-specific symbols.
- Accessibility: if the checklist becomes staff-facing or public-facing guidance, use plain language, readable font size, strong contrast, and wording that works for staff who rotate into the counter role.

- Online contingency: prepare a PDF copy and a one-page summary. If screen sharing fails, explain the three main numbers aloud and send the summary after the meeting.
- Q&A contingency: keep the staff feedback summary as backup for questions about waiting time and workload.

Skills You Can Practise

Unit connection	Skill shown in this model
Unit 3	Results briefing structure: objective, process, results, learning, recommendation, action
Unit 4	Preview, transitions, cautious summary, and action close
Unit 6	Before/after chart explanation with fictional-data labeling
Unit 9	Online or recorded adaptation for a results briefing
Unit 10	Evidence-based Q&A, limitation language, safe deferral, and next action
Unit 12	Final workplace model with evidence, recommendation, timing, and Q&A

Compare the Two Models

The two variants teach the same presentation skill, but the workplace pressures are different.

Skill	Banking/leasing or general trading-company operations variant	Government administrative variant
Main decision	Expand an exception resolution process to the Kansai Machinery Imports and Nagoya Parts Coordination desks.	Expand an intake checklist to childcare fee reduction applications and elderly transport pass applications.
Evidence type	Late document handoffs, rework time, ownership feedback.	Returned applications, repeat inquiries, attachment-related returns.
Main limitation	Volume effects and duplicate log entries.	Short trial period and added counter time.
Sensitive information risk	Client names, account or transaction data, shipment IDs, desk names, internal control findings.	Applicant information, ID fields, case numbers, staff records, public-facing guidance.

Skill	Banking/leasing or general trading-company operations variant	Government administrative variant
Natural visual	Before/after bar chart plus “what changed” table.	Process Note plus before/after bar chart.
Q&A pressure	Is the result large enough and controlled enough to expand?	Does the result justify expansion without slowing service?

Neither model should be used for investment advice, securities-market prediction, legal advice, policy argument, or political advocacy. Both models are about operational results, evidence, limitations, and next steps.

Appendix: Slide Design Checklist

Use this checklist when you prepare or revise slides, visual packs, dashboards, charts, or screen-shared materials for a presentation.

Message and Purpose

Check	Yes / Not yet	Notes
The visual has one clear job.		
The visual supports what the audience needs to understand, decide, or do.		
The slide or visual has one main message.		
Extra detail is moved to backup material, an appendix, a pre-read, or a follow-up handout.		

Title and Text

Check	Yes / Not yet	Notes
The title states the takeaway, not only the topic.		
The text is concise and does not become a script.		
Labels and short phrases are clear and natural in English.		
The spoken explanation adds value beyond the visible text.		

Layout and Hierarchy

Check	Yes / Not yet	Notes
The most important information is easiest to see first.		
Related items are grouped clearly.		
Objects are aligned deliberately.		
Margins, spacing, and object sizes are consistent.		
The slide has enough white space.		
The starting point is clear.		

Color, Contrast, and Accessibility

Check	Yes / Not yet	Notes
Text is readable against the background.		
Color has a clear purpose.		
Meaning does not depend on color alone.		
Color is supported by labels, position, shape, or pattern.		
The visual is readable in the real delivery setting.		
If the file will be shared, meaningful visuals have alt-text awareness.		
If the presentation is recorded, captions or transcript support are considered.		

Visual Type

Purpose	Suitable Visual Type
Show a process change	Before/after workflow
Show a change over time	Line chart or simple bars
Compare two or more items	Bar chart, paired bars, or small table
Show a schedule	Timeline
Show main issues	Ranked list or simple table
Show status at a glance	Dashboard or summary panel

Before using a complex visual, ask: does this make the point clearer, or only make the slide look more complicated?

Charts and Evidence

Check	Yes / Not yet	Notes
The chart has a takeaway title or clear chart title.		
The most important number, trend, or comparison is easy to find.		
Labels are readable.		

Check	Yes / Not yet	Notes
The chart does not use unnecessary colors or categories.		
The data source or fictional-data note is included where needed.		
Any limitation or caution is prepared for the spoken explanation.		

Images, Icons, and Media

Check	Yes / Not yet	Notes
Images clarify or support the message.		
Images do not feel generic or decorative only.		
Important text is not placed over a busy image.		
Icons and visual symbols are easy to understand.		
Image, template, or media source and license status are acceptable.		
No confidential or identifying information is visible.		

Style and Consistency

Check	Yes / Not yet	Notes
Fonts are consistent.		
Colors are consistent.		
Line weights, boxes, and icons use a consistent style.		
Branding or house style supports clarity instead of dominating the message.		
Animation, transitions, audio, or video are used only when they help understanding.		

Delivery and Export

Check	Yes / Not yet	Notes
The visual works for the delivery mode: in person, online, hybrid,		

Check	Yes / Not yet	Notes
or recorded.		
Fonts, charts, media, and links work after export.		
A PDF fallback is ready if needed.		
The file opens on the actual device or platform.		
Sensitive information has been removed or masked.		

Final Speaker Check

Prepare a short explanation using these questions:

1. What should the audience notice first?
2. What does the visual show?
3. What is the main point?
4. What detail will you explain aloud instead of putting on the slide?
5. How does the visual support your recommendation, decision request, or next step?

Remember: a good slide or visual supports the presenter. It does not replace the presenter.

Back Matter

Source and Privacy Note

The workplace examples and figures in this draft are fictional or sanitized for classroom use. Do not add real client names, account information, personal data, confidential project details, or unreleased business figures to a classroom presentation unless your organization has approved their use.
